The effect of Zinc Supplementation on Sleep quality and fatigue in the elderly

Protocol summary

Summary

Objective: Determining the effect of Zinc Supplement on Sleep quality and fatigue in the elderly. Design: This study is a clinical trial study in which questioners and data analysts have been blinded. Study population: Seniors 60 years and older in Kashan. Main inclusion criteria: Having full satisfaction to participate in this study; Iranian citizenship; not using Zinc Supplement; no cognitive impairment; lack of liver and intestinal diseases diagnosed by the doctor and People with serum zinc levels in them based on experiment within be normal range. Main exclusion criteria: The lack of cooperation and refusal of the elderly to continue to participate in research; consumption of Zinc Supplement in the control group during the course of 70 days of intervention; The occurrence of severe stress in both groups during the study. Those who did not use sleep medications before the intervention began but after the intervention begins and in the 70-day study period taking a sleep medication will be excluded. For city-level sampling first, the health centers that cover the population groups they are considered as clusters. Then, relative to the number of the elderly located in each cluster 150 elderly they will be selected by stratified sampling. To measure serum zinc level 5 ml venous blood sample taken in fasting conditions of the elderly both intervention and control groups and sent to lab; Then PSQI sleep quality inventory and MFI fatigue inventory will be completed by the elderly. For the elderly of the intervention group for 10 weeks Zinc supplement 30 milligrams which will be given in the form of Zinc Gluconate. In the elderly, Zinc supplementation control group will not be used. After 70 days serum zinc level will be measured again as well as questionnaires will be completed by the elderly.

Parallel

Other design features

Select clusters is based on socioeconomic conditions of the people of Kashan city. Random assignment to test and control groups based on randomized software in the form of four blocks will be grouped and in two groups A (intervention) And group B (control) will be placed. Zinc measurements in a laboratory in Kashan and will be done by auto-analysis. Relaxation exercises will be taught if aging after 70 days of low sleep quality or high fatigue is based on Pittsburgh Sleep Quality and MFI Inventory.
