The effect of family-based counseling on the basis of the BASNEF model on the frequency of smoking among smokers in pregnant women

Protocol summary

Summary

The effect of family-based counseling on the basis of the BASNEF model on the frequency of smoking among smokers in pregnant women. Objective: The effect of family-based counseling on the basis of BASNEF model constructs on the frequency of smoking among smokers in the pregnant mother's family Design: This is a pretest-posttest randomized not blind clinical trial study with two groups. Sampling will be done randomly and available among pregnant women referring to Hamedan comprehensive health centers and will have all the criteria for entering the research. A total of 106 female smokers of pregnant women will be randomly divided into two groups of 53 people. Setting and conduct: In the intervention group, educational-consultation program smoking cessation in the presence of a pregnant woman and will not be intervened in the control group. The criteria for entry into the gestational age are not below 30 weeks of pregnancy, the pregnant mother is a smoker and not a hookah. The mother is exposed to tobacco smoke during the night by his or her partner in a closed home, and the smoker is not addicted to any type of drug. Exit criteria: The participant for any reason and at any time to discontinue cooperation, the pregnant mother needs hospitalization due to physical or psychological problems. Intervention: Intervention in four sessions of the Bessenfocus Counseling Group for non-smoking in the presence of pregnant women in groups of ten for individuals in the intervention group for 60 minutes.

Primary outcomes

1

Description

Succeeding in quitting a pregnant woman's presence

Timepoint

Before intervention to 1 months after intervention

Method of measurement

Success Stomach Quitting Questionnaire based on BASNEF Model

Secondary outcomes

1

Description

Success of smoking cessation

Timepoint

Before intervention to 1 months after intervention

Method of measurement

A researcher-made questionnaire measuring smoking cessation based on the BASNEF model

Intervention groups

1

Description

Intervention group: Of the 53 pregnant women, the smoker's home will be used as an intervention group. Intervention in smokers will also house pregnant women and there will be no intervention in pregnant women. By telephone, the consultation timetable is coordinated with the intervention group and the time for the consultation sessions is determined. In this research, intervention will be family-centered counseling. Meetings will be grouped by a maximum of 10 people. The duration of each session is about 60 minutes and the number of sessions of 4 sessions will be at least 1 week. The counseling will be conducted by the researcher in all groups based on counseling steps on reproductive health services (GATHER). The objectives of our study are as follows: Session 1: A counseling session to introduce a smoker to smoke and harmful substances to a smoker and his relatives, especially pregnant and fetus, which is synonymous with GATHER steps 1, 2 and 3. Session 2: Counseling for a smoker A few cigarette smoke explanations, including second hand smoke, active smoker and active smoker, are synonymous with steps 2 and 5 of GATHER counseling. Session 3: A counseling session for a smoker to know about the effects of cigarette smoking during childbirth, childhood and adolescence on exposure to cigarette smoke and the options available to prevent exposure to pregnant women with cigarette smoke is synonymous with

GATHER steps 3, 4 and 5. Session 4: Mention the summary of the contents of the past sessions and provide queries and answers to help eliminate the ambiguities of smokers, which is synonymous with step 6 of GATHER counseling. Then, the test group will be asked to apply the principles that they are trained when attending the home and the pregnant woman. After completion of the follow-up period (one month later), the initial questionnaire is again completed by the two groups. The obtained data will be analyzed by statistical analysis.
