Evaluation of histomorphometric effects of risedronate gel (2%) on calvaria bone defects in rabbits

Protocol summary

Summary

Objective: Evaluation of histomorphometric effects of risedronate gel (2%) on reconstruction of calvaria bone defects in New Zealand white rabbit. Design: Randomized (randomized block design - with two groups of ten, case and control groups); double-blind (blinded for the subjects and evaluation committee); placebo-controlled. Sample size: Twenty male New Zealand rabbits with the same breed and weight. Inclusion criteria: Animals with same weight, age and gender; without disease. Exclusion criteria: Diagnosis of the disease. Method: Randomized clinical trial. Duration: Four & eight weeks. Setting and conduct: After giving anesthesia, we make two full thickness 8 millimeter defects in calvaria bones of each rabbit by using a Dask bur. In group 1, the right defect is filled with risedronate 2% gel and the left defect is empty. In group 2, right defect is filled with placebo gel and left defect remain empty. Then the area will be stitched. At the end of each month (for two consecutive months - month1 and month2) five rabbits will be euthanized and their calvaria bone will be removed for histomorphometric study, and samples will be sent to pathologist. Intervention: 1- Risedronate 2% gel; once, during surgery; localized in bone defect. 2-Placebo gel; once, during surgery; localized in bone defect. Primary outcome variables: The amount of bone filling; inflammation; osteoblasts; oteoclasts; foreign body reaction. Secondary outcome variables: Infection; presence of the disease.

Scientific title

Evaluation of histomorphometric effects of risedronate gel (2%) on calvaria bone defects in rabbits

Public title

Evaluation of effect of risedronate on the process of bone formation in rabbit's skull

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Animals with same weight, age and gender; without disease. Exclusion criteria: Diagnosis of the disease.

Age

From **6 months** old to **7 months** old

Gender

Male

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size:

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Bone loss

ICD-10 code

K05

ICD-10 code description

Gingivitis and periodontal diseases

Primary outcomes

1

Description

The amount of bone filling

Timepoint

Four weeks after intervention, eight weeks after
intervention

Method of measurement

by microscopic observation

2

Description

Inflammation

Timepoint

Four weeks after intervention, eight weeks after
intervention

Method of measurement

by microscopic observation

3

Description

Osteoblasts

Timepoint

Four weeks after intervention, eight weeks after
intervention

Method of measurement

by microscopic observation

4

Description

Osteoclasts

Timepoint

Four weeks after intervention, eight weeks after
intervention

Method of measurement

by microscopic observation

5

Description

Foreign body reaction

Timepoint

Four weeks after intervention, eight weeks after
intervention

Method of measurement

by microscopic observation

Secondary outcomes

1

Description

Infection

Timepoint

Before intervention, during intervention, after
intervention

Method of measurement

Observation, examination

2

Description

The presence of the disease

Timepoint

Before intervention, during intervention

Method of measurement

By the veterinarian

Intervention groups

1

Description

Risedronate 2% gel; once, during surgery; localized in bone defect.

Category

Treatment - Drugs

2

Description

Placebo gel; once, during surgery; localized in bone defect.

Category

Placebo
