The Impact of Family Care Management - The Focal Point of Family Reproduction and the Condition of Neonatal Jaundice in the Neonatal Zone Hospital affiliated to Iran University of Medical Sciences in 2017

Protocol summary

Summary

The objectives were to determine and compare the satisfaction of the family before and after the family-focused care in the two intervention and control groups in the neonatal group and to determine and compare the status of the cases of pre-jaundiced neonates before and after family-centered care in two groups of intervention and control in the neonatal group. The present study is a randomized clinical trial. The research population includes mothers and newborns admitted due to jaundice in the neonatal intensive care unit of Shahidakbar Abadi Hospital, who will be placed in two groups of interventional and obstetric mothers when participating in the study of mothers. Conditions of entry: The baby is 32-36, other illness other than jaundice, after birth and discharge according to medical records. There is no physical and neurological illness and it is for the first time that it has been admitted for this reason. The baby is born in Shaheed Akbar Abadi Hospital. At least 3 days in hospital. Conditions for exiting the baby: multi-strand, Parental Entry Requirements: Parents are no longer cared for with no jaundice in the baby. Family members are from the medical group. The family has the ability to care for children and have long hours at least 18 hours in the special care department. At least the age of the person is 18 years. Care should be taken in the language of Persian to read and write. Exit Conditions: Parents have maternal illnesses. They have addiction to drugs or drugs. Previous children have been suffering from a family history. Olden has participated in a research similar to that of the present study. Families that are eligible for research and 24 hours after admission to their jaundice. The intervention and control group is randomly selected and then the researcher aims at the research and method. In the intervention group, at a lecture session. Asking and answering the baby's questions in accordance with the model below. Provides training to the

family in the intervention group. Exercises on the physiologic jaundice of the infant and the causes, types, symptoms and complications of it, and measurement. The amount of jaundice in the baby using the Kramer tool is how to breastfeed the baby in the incubator. Registration of milking time, touching and touching the skin with skin and kangaroo massage and baby massage, comfortable position of mother and baby. During the baby's incubation and nursing and infant burrowing. Changing baby diapers and cleaning her and keeping diapers for nursing information to measure urine and stool, bathing, changing position, The presence of a mother in infant's bedside in infant care since the delivery of the shift. The infection control system is to wash hands with antiseptic solution. The mother or caregiver then runs 2 times in the presence of a caregiver, and in other cases they do away with mother tongue and others. What training is given to the caretakers of an office? After completing the period of parental care and treatment, the parents are assessed for the implementation of care. The status of the baby is measured at the time of discharge. And variables include family satisfaction and the status of hospitalized infants.
