Comparison of the Effectiveness of Baby's Washing and Massage in Physiological Jaundice in Infants

Protocol summary

Study aim

Determination of the effect of washing the baby and massage on the physiological jaundice in newborns

Design

In this research 90 newborns are born Association were chosen purposefully Then, newborns , were randomly divided into three control and intervention groups.

Settings and conduct

A study was conducted on the effect of infant washing and massage on physiological jaundice in Ardakan Ziaee Hospital. Birth children were randomly divided into three groups. The study was a blind clinical trial and the assistant was blind to the data.

Participants/Inclusion and exclusion criteria

Admission criteria: Apgar score greater than 7 and gestational age 38 to 42 weeks, weight greater than 2500 g, Clear anomalies Exit criteria: Apgar 7 and under 7, admission to the newborn

Intervention groups

Massage group: Massage was performed twice a day for 5 days Washing group :Babies were washed immediately after birth Control group: Infants received routine care

Main outcome variables

Both massage and washing stimulate the secretion of gastrin, prevent breast feeding and reduce the physiologic jaundice.

Comparison of the Effectiveness of Baby's Washing and Massage in Physiological Jaundice in Infants

Public title

' Effect of Massage and Washing in Physiological Jaundice''

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

All babies born with fetal age range 37 to 42 weeks weight more than 2500 grams Apgar above 7 after birth lack of obvious congenital anomaly

Exclusion criteria:

Pathological jaundice, Baby hospitalization, Canceling the plan

Age

From **1 day** old to **7 days** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Care provider

Sample size

Target sample size: **90**

Actual sample size reached: **71**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization method: Simple randomization
Randomization tool: Wax sealed. Three envelopes were placed inside the envelopes 1, 2 and 3. The investigator randomly selected one of the envelopes and determined by the number inside the group in which the baby was placed.

Blinding (investigator's opinion)

Not blinded

Blinding description

It was a blind one study. The investigator's assistant checked the bilirubin on the prescribed days, and was unaware of the groups.

Placebo

Title and more details about the data/document

The total potential data can be shared after unidentifiable people

When the data will become available and for how long

Start the access period 6 months after printing the results

To whom data/document is available

Data will be available to researchers working in academic and academic institutions and students

Under which criteria data/document could be used

Data is available for students to help investigate similar projects while retaining the contents

From where data/document is obtainable

To receive data at e.noroozi@yahoo.com And call the phone 09132517951

What processes are involved for a request to access data/document

After receiving the application for data, the applicant will be provided with the documentation within two days
