Impact of oral Clonidine on consumption of sedative agents in mechanically ventilated patients in pediatric intensive care unit

Protocol summary

Registration timing: **registered_while_recruiting**

Study aim

Our goal is to investigate impact of Clonidine on level of sedative agents usage in mechanically ventilated children in PICU

Design

This randomized, double-blind, placebo-controlled, parallel-group and single center study will be conducted in PICU of Mofid Children`s Hospital, Tehran, Iran. Hundred children randomly divided in two groups , Treatment (No.1) and Control (No.2) by main administrator .

Settings and conduct

Randomized, double-blind, placebo-controlled, parallel-group and single center in Mofid Children`s Hospital, Tehran. Medical team (doctor and nurse) are blinded.

Participants/Inclusion and exclusion criteria

Inclusion criteria : Children aged from 31 days to 15 years requiring ventilation for at least 3 days in PICU .
Exclusion criteria : Renal and hepatic failure ;
Gastrointestinal intolerance ; Severe neurological disorders ; Inotrope use ; Bradycardia and Hypotension .

Intervention groups

Participants will be randomized 1:1 to (group 1) fixed dose 5 µg/kg Clonidine every 6 hours via NGT(Abidi Pharmaceutical, Iran) plus variable dose 0.5 -2 µg/kg/hr Fentanyl and 0.05- 0.1 mg/kg Midazolam (titrated by Ramsay scale 2-3) or placebo (group 2) variable dose 0.5 - 2 µg/kg/hr Fentanyl and 0.05- 0.1 mg/kg Midazolam.(titrated by Ramsay scale 2-3)

Main outcome variables

Sedation

Impact of oral Clonidine on consumption of sedative agents in mechanically ventilated patients in pediatric intensive care unit

Public title

Impact of Clonidine on children sedation in PICU

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Children with age of 31 days to 15 years requiring mechanical ventilation for 3 days.

Exclusion criteria:

Age

From **31 days** old to **15 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization

Blinding (investigator's opinion)

Double blinded

Blinding description

Double blind Patient and medical team are blinded. Only one of research team is not blinded and is in charge of data collection.

Placebo

Health conditions studied

1

Description of health condition studied

Sedation in PICU

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Level of Fentanyl dosage

Timepoint

Total Fentanyl dosage based on 0.5 - 2 mcg/kg/hr in 24 hours up to end of ventilator support .

Method of measurement

Ramsay Scale has 6 levels : level 1 anxious/agitated and level 6 deep sedation/ no response .Our goal is titrating Fentanyl to maintain patients on levels 2 - 3 (cooperative /respond to command) .

2

Description

Level of Midazolam dosage

Timepoint

Total Midazolam dosage based on 0.05 - 1 mg/kg in 24 hours up to end of ventilator support .

Method of measurement

Ramsay Scale has 6 levels : level 1 anxious/agitated and level 6 deep sedation/ no response .Our goal is titrating Midazolam to maintain patients on levels 2 - 3 (cooperative /respond to command) .

Secondary outcomes

1

Description

adverse effects

Timepoint

daily

Method of measurement

observation on signes and symotoms

Intervention groups

1

Description

Treatment group or group 1 : Clonidine with fixed dose 5 µg/kg every 6 hours via NGT(Abidi Pharmaceutical, Iran) plus with variable dose Fentanyl 0.5 - 2 µg/kg/hr and Midazolam 0.05 - 0.1 mg/kg .

Category

Treatment - Drugs

2

Description

Control group: In this group , placebo is administered

with variable dose Fentanyl 0.5 - 2 µg/kg/hr and
Midazolam 0.05 - 0.1 mg/kg .

Category

Treatment - Drugs
