The effect of self care education through social networks on quality of life in type 1 diabetic patients

Protocol summary

Summary

The purpose of this study was to investigate the effect of self-care education through virtual social networks based on the telegram network and through SMS on the quality of life of patients with type 1 diabetes. The criteria for entering the study include: age range of 33 to 13 years old, living in Sanandaj. Over a year of diagnosis of type 1 diabetes - Having a history of insulin injections - A case of acute illness that affects the quality of life of the patient during the previous month - Reading and writing literacy by the patient or his caregiver - A commitment to the company In a mobile-based study, use SMS or social networking services such as a telegram, Naite reading SMS-No known psychological illnesses-A lack of advanced diseases in your vital organs, such as the liver and kidneys - will be considered as an adult with severe vision and hearing impairment. Exit criteria include: - During the hospital during the study, the reluctance to continue to be included in the study will be considered. In this case, alternative samples are considered. A total of 80 patients with type 1 diabetes are selected. The participants in the study are randomly divided into two groups of intervention and control. A questionnaire is developed through creating a telegram channel to the intervention group of self-care education. Quality of life is completed in two groups, once before intervention and once after intervention.
