Designing and evaluating an educational serious game to improve the Skill Indicators of obstetrics and gynecology residents

Protocol summary

Study aim

Improvement of the skill indicators of second and third year residences of the department of obstetrics and gynecology in the uterine and ovarian arteries ligation

Design

Sample size: 46 (Mashhad: 30 [third year residents:15, second year residents:15] , Zahedan: 30 [third year residents:8, second year residents:8]) Randomization: Simple via www.randomization.com website Study design: Randomized control trial, two arm, concurrent parallel

Settings and conduct

Setting: OmolBanin hospital in Mashhad medical university and ImamAli hospital in Zahedan medical university. Blinded peoples: 1-Assessors in pre and post test, 2-Statistical analyzer. The second and third year obstetrics and gynecology residents who are studying in the current academic year are subjected to a pre-test by a questionnaire that will be finally validated and verified. Then an educational serious game will be designed to train the skill indicators of the second and third year residents in the uterine and ovarian arteries ligation. Residents in the intervention group will interact with the educational serious game, and will meet gradual and academic training during the engagement with this game. Then they will be asked for the post-test. This intervention is expected to be effective, and the score of the intervention group is significantly higher than that of the control group in the post-test, which is indicative of improving their skill indicators in closure of the uterine and ovarian arteries ligation.

Participants/Inclusion and exclusion criteria

The second and third year obstetrics and gynecology residents

Intervention groups

The second and third year obstetrics and gynecology residents

Main outcome variables

Skill indicators difference between intervention and

control groups in uterine and ovarian arteries ligation

General information

Reason for update

We received confirmation code in pervious format from irct.ir; it was in short site. In the new format, we intend to give the public our project data completely and clearly. We therefore updated site.

Scientific title

Designing and evaluating an educational serious game to improve the Skill Indicators of obstetrics and gynecology residents

Public title

Design and evaluation of an educational Serious Game to uterine artery ligation

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

resident of the second and third year of obstetrics and gynecology

Exclusion criteria:

no participation of resident in the pre-test

Age

From 20 years old

Gender

Female

Phase

N/A

Groups that have been masked*No information***Sample size**

Target sample size: 47

Actual sample size reached: 46

Randomization (investigator's opinion)

Randomized

Randomization description

Method of randomization: simple tools used in randomization: randomization.com website

Blinding (investigator's opinion)

Single blinded

Blinding description

healthcare providers (OSATs assessor) and outcome assessors were blinded.
