

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Effect of training the practical methods of activities of daily living on independence and satisfaction of elderly people.

Protocol summary

Summary

Objectives: Investigation about the effect of training the practical methods of activities of daily living on independence and satisfaction of elderly people. Design: Randomized control trial research. The participants are assigned randomly into two groups of intervention (N=40) and control group (N=40). The two groups are matched for age, gender and educational level. Setting and conduct: Karaj Kahrizak Charity Foundation. Major Inclusion criteria: Elderly above 60 years; Ability to read and write in Persian Major Exclusion criteria: Affected by neurological diseases such as Stroke, Parkinson Disease, Spinal Cord Injuries, and Alzheimer; Mini Mental Status Examination (MMSE) score below than 21 Intervention: The activities of daily living are trained in intervention group by an expert occupational therapist. The treatment protocol consists of two 45-minute group training sessions. The control group receives no training. Four months later, the ability of participants are evaluated again in both groups to determine the effect of training sessions. Main outcome measures: Activities of daily living; Activity satisfaction
