02 Aug 2026

Clinical comparison of the retention of fissure sealant following preparation with seventh generation bonding agent with separate etch and preparation with etch and rinse(fifth generation

Protocol summary

Study aim

The objective of this study was clinical comparison of the retention of fissure sealant following preparation with seventh generation bonding agent with separate etch and preparation with etch and rinse(fifth generation).

Design

The samples will be 40 individuals in the age group of 7-12 years randomly selected by randlist software, in which they have a pair of first permanent healthy molars without 2-sided mandibular molars decay with condition of fissure sealant therapy. Then, patients were non-randomly divided in two control and intervention groups. Clinical-trial phase is not exemplified in this study.

Settings and conduct

This clinical trial study on decay prevention will be done in Tabriz Dentistry Faculty. the samples will be 40 individuals in the age group of 7-12 years . In each sample, a tooth will be treated by preparation method with a seventh-generation bonding method plus a separate etch and the same tooth in the opposite side will be treated with the usual preparation method (etching acid with bonding) with fifth generation of sealant.

Participants/Inclusion and exclusion criteria

Inclusion Criteria 1)7-12 years of age,2)presence of two first lower molars without caries, 3)deep groove that indicate fissure sealant therapy,4)satisfaction of parentes. Exclusion Criteria 1) carious molars, 2)if two molars were not in the same jaw

Intervention groups

Intervention group: fissure sealant therapy with Clearfil S3 Bond and separate etch in a molar tooth in one quadrant of the mandible Control group: fissure sealant therapy with acid etch and bonding in the molar of the opposite side of the intervention group

Main outcome variables

Retention of fissure sealant

Scientific title
Clinical comparaisn of the retention of fissure sealant following preparation with seventh generation bonding agent with separate etch and preparation with etch and rinse(fifth generation

Public title
The clinical comparison of two methods for sealing fissures of young permanent teeth

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
7-12 years of age presence of two first lower molars without caries deep groove that indicate fissure sealant therapy satisfaction of parentes
Exclusion criteria:
carious molars if two molars were not in the same jaw

Age
From **7 years** old to **12 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **40**
More than 1 sample in each individual
Number of samples in each individual: **2**
two intact first molars were in the lower jaw

Randomization (investigator's opinion)
Not randomized

Randomization description

Blinding (investigator's opinion)
Not blinded
