Investigation of effects of Ritalin on giggle incontinence in children referring to Dr Sheikh hospital

Protocol summary

Study aim

Determination of effects of Ritalin on giggle incontinence in children referring to Dr Sheikh hospital

Design

In this study, all patients with giggle incontinence who refer to Nephrology Clinic, after being informed and acquisition of consent, will be included in the study.

Settings and conduct

Giggle incontinence is a type of incontinence in children that appears in the form of a little and sudden wetness which is unpredictable and is determined by unintentional depletion of bladder followed by giggling with normal function of bladder at other hours. This study is going to be carried out in Dr. Sheikh Hospital of Mashhad. There will be thorough neural and physical examination and assessment for all children. No blinding is done in the study. Finally after a month of drug use, patients will be evaluated from a medical response point of view. Medical response is then divided to 3 levels as following: 1-no response 2- relative response as reduction of incontinence numbers to half and 3- complete improvement.

Participants/Inclusion and exclusion criteria

All patients with giggle incontinence will be included in the study and children with neurologic urinary disorders, congenital anomalies and obstruction issues will be excluded.

Intervention groups

Intervention group: Patients are prescribed 0.2 milligram of Ritalin daily for one moth. It is recommended that the drug be given to children before going to school. Control group: Patients will be given Oxybutynin drug with dose of 0.1 milligram per kilogram. After a month, patients will be evaluated.

Main outcome variables

Rate of control and improvement of incontinence after use of Ritalin

Scientific title

Investigation of effects of Ritalin on giggle incontinence in children referring to Dr Sheikh hospital

Public title

Investigation of effects of Ritalin on giggle incontinence in children

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

older than five years old patients with giggle incontinence completion of informed consent form no existence of urological diseases

Exclusion criteria:

patients with neurogenic bladder congenital disorders of urinary system urinary tract obstruction neurological disorders such as myelomenonucle unwillingness to participate in the study

Age

From **6 years** old to **12 years** old

Gender

Female

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **20**

Actual sample size reached: **15**

Randomization (investigator's opinion)

Randomized

Randomization description

Using table of random numbers and envelope method, patients will be divided to two groups

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

No blinding is done.

Title and more details about the data/document

All data can be shared after patients are made unidentifiable.

When the data will become available and for how long

Data can be accessible 6 months after results are published.

To whom data/document is available

Data will be available for researchers in universities and other scientific institutes.

Under which criteria data/document could be used

Carrying out analysis on data is permitted.

From where data/document is obtainable

Data can be accessible through sending an email to the corresponding author.

What processes are involved for a request to access data/document

After sending a request email to the corresponding author, data will be sent in 1 month.
