

Clinical Trial Protocol

Iranian Registry of Clinical Trials

01 Aug 2026

Evaluation efficiency of autologous fibroblast (Cell fibrosin) transplantation in facial wrinkles

Protocol summary

Study aim

Efficacy assessment of fibroblast cells in facial wrinkle is the aim of this study

Design

In this research, 46 eligible candidate referring to facial wrinkle were chosen purposefully and a code was allocated to each one of them. Biometric parameters of candidate face before intervention would be measured and then suspension of fibroblast cells would be injected in candidate facial wrinkle.

Settings and conduct

Firstly biometric parameters of candidate face before intervention would be measured and then about 0.5 cm² of skin biopsy from behind the ear would be taken via puncher. Fibroblast cells isolated and cultured in laboratory. Cell suspension of fibroblast cells would be injected in candidate facial wrinkle. After 1,3,6 month from injection, biometric parameters will be assessed for second time to estimate healing rate.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age about 35 to 65 years old; having no anatomic disorder in face; wrinkle type between grade 2 to 4; normal mental health; ability to comply with the study requirements; provide written informed consent and comply with the study requirements; negative pregnancy test (females). Exclusion criteria: being smokers or drinkers any past skin intervention in face; having many wrinkles on the face type of 1 or 5 of wrinkle scoring; having a mental disorder; previous treatment with the sponsor's product; history of active autoimmune disease or organ transplantation; diagnosis of cancer; unless successfully treated or in remission (basal cell carcinoma is excluded); active or chronic skin disease; known genetic disorders affecting fibroblasts or collagen; active systemic infection requires chronic antibiotic or steroidal therapy; use of certain commercial products/procedures to the treatment area prior to study enrollment or plans for use during the study Known allergic reactions to agents used in preparation of

treatment, Excessive exposure to sun without adequate sun protection; use of systemic agents that increase bleeding or clotting, or disorders equated with these effects.

Intervention groups

Cell suspension of fibroblast cells would be injected in candidate facial wrinkle

Main outcome variables

Rejuvenation and facial wrinkle therapy with autologous fibroblast injection

Scientific title

Evaluation efficiency of autologous fibroblast (Cell fibrosin) transplantation in facial wrinkles

Public title

Efficacy assessment of cell therapy in skin aging

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

age about 35 to 65 years old Having no anatomic disorder in face Wrinkle type between grade 2 to 4 Normal mental health Ability to comply with the study requirements Provide written informed consent Negative pregnancy test (Females)

Exclusion criteria:

being smokers or drinkers any past skin intervention in face Having many wrinkles on the face type of 1 or 5 of wrinkle scoring having a mental disorder Previous treatment with the filler's product History of active autoimmune disease or organ transplantation Diagnosis of cancer, unless successfully treated or in remission (basal cell carcinoma is excluded) Active or chronic skin disease Known genetic disorders affecting fibroblasts or collagen Active systemic infection Requires chronic antibiotic or steroidal therapy Known allergic reactions to agents used in preparation of treatment Excessive exposure to sun without adequate sun protection Use of systemic agents that increase bleeding or clotting, or disorders equated with these effects
