Effectiveness of Anger Control Skills Training on Improving Self-esteem in Women with Breast Cancer after Mastectomy Surgery

Protocol summary

Study aim

survey the effectiveness of anger control skills training on improving self-esteem in women with breast cancer

Design

In this research, 30 women with breast cancer after mastectomy surgery were chosen purposefully and a code was allocated to each one of them. Then, patients were randomly divided into two control and intervention groups.

Settings and conduct

This research was carried out in several hospitals in Tehran that received cancer patients. In each hospital in coordination with authorities, a room for intervention is selected, and for each participant in the study, special intervention sessions will be held.

Participants/Inclusion and exclusion criteria

Women who have breast cancer and had mastectomy surgery.

Intervention groups

We have two groups in this study. An intervention group that receives anger control skill training and a control group that does not receive this training.

Main outcome variables

Achieving that teaching anger control skills can improve the self-esteem of women with cancer or not.

Scientific title

Effectiveness of Anger Control Skills Training on Improving Self-esteem in Women with Breast Cancer after Mastectomy Surgery

Public title

The effect of anger control training on improving the self-esteem of women who had cancer and had mastectomy surgery

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Having breast cancer Mastectomy surgery
Exclusion criteria:
 Taking medications that affect cognitive function.
 Dissatisfaction to participate in research.

Age
 No age limit

Gender
 Female

Phase
 N/A

Groups that have been masked
No information

Sample size
 Target sample size: **30**
 Actual sample size reached: **30**

Randomization (investigator's opinion)
 Randomized

Randomization description
 Simple randomization: Each participant was assigned to a numerical study, then randomization was performed using a random number table, and subjects were assigned to two experimental and control groups. The sampling unit is individual. This research was not possibility of hiding the intervention according to the limited.

Blinding (investigator's opinion)
 Not blinded
