

Clinical Trial Protocol

Iranian Registry of Clinical Trials

21 Jul 2026

investigating the effect of effleurage massage and diluted vinegar solution on relieving pruritus among patients undergoing hemodialysis

Protocol summary

Study aim

Investigating the effect of effleurage massage and diluted vinegar solution on relieving the pruritus of hemodialysis patients in Bandar Abbas educational-treatment hospitals

Design

Each patient based on receiving a code from 0 to 60, is placed into one of groups (investigation or control) due to random number table

Settings and conduct

The study is a clinical trial and the samples were placed into two groups of intervention and control using a random number table and intervention group received the effleurage massage and diluted vinegar solution and control group received only routine care of the unit. The place of performing research was in Bandar_abbas educational-treatment hospitals . This study was two-sided and a valuator completed the questionnaires using the patient identification and statistical analyzer analyzed the data using the group number.

Participants/Inclusion and exclusion criteria

Include: All patients over the age of 18 who have been treated for hemodialysis for more than three months and complain of uremic urethra and dialysis three times a week and undergo hemodialysis every 3-5 hours.

Exclude: Having massage prohibition, sensitivity to vinegar solution, lack of satisfaction, another skin problem other than uremic pruritus

Intervention groups

Intervention group receives effleurage massage and diluted vinegar solution and control group only receives routine care of the unit.

Main outcome variables

The investigation of effleurage massage and diluted vinegar solution on uremic pruritus.

Scientific title

investigating the effect of effleurage massage and diluted vinegar solution on relieving pruritus among patients undergoing hemodialysis

Public title

investigating the effect of effleurage massage and diluted vinegar solution on relieving pruritus among hemodialysis patients

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Performing hemodialysis three times a week Age over 18 years History of hemodialysis more than three months Each hemodialysis session lasts for 3-5 hours

Exclusion criteria:

massage prohibition sensitivity to vinegar solution skin problem other than uremic pruritus lack of patient satisfaction

Age

From **18 years** old

Gender

Both

Phase

3

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **60**

Actual sample size reached: **52**

Randomization (investigator's opinion)

Randomized

Randomization description

each patient entering the study received a code from 0 to 60, then the samples were divided into two groups of investigation and control using a random number table.

Blinding (investigator's opinion)

Double blinded

Blinding description

an evaluator who was not informed about which patient belongs to which group (intervention or control), completed the scales using the patient identification code. then the statistics analyzer analyzed the data using the group number(1,2).
