Effect of clofibrate in low birth weight neonates' hyperbilirubinemia

Protocol summary

mashhad university of medical science

Summary

The goal of this study was to evaluate the effect of Clofibrate in the treatment of jaundice in low birth weight newborns. In a randomized double blind placebo - controlled study, low birth weight infants with the complaint of icter are selected. Study participants receive either clofibrate 100 mg/kg or distilled water once time/ day. Then they receive phototherapy and their bilirubin level is measured in 12hr, 24hr, 48hr, and 72 hr afterword.

Effect of clofibrate in low birth weight neonates' hyperbilirubinemia

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: All neonates with birth weight less than 2500gr who have icter. Exclusion criteria: the presence of a hemolytic, infection, congenital anomaly or metabolic disorder and undergoing mechanical ventilation.

Age

From **2 years** old to **28 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **60**

Other low birth weight

2

Description of health condition studied

hyperbilirubinemia

ICD-10 code

P59.0

ICD-10 code description

Neonatal jaundice associated with preterm delivery

Primary outcomes

1

Description

decreasing of serum bilirubin

Timepoint

befor intervention and 12,24,48,72 and 96 hours after intervention

Method of measurement

measurment of serum bilirubin (diazo method)

Secondary outcomes

1

Description

tereatment of jaundice of neonate

Timepoint

befor intervention and 24,48,72 and 96 hours after intervention

Method of measurement

decreasing of jaundice and bilirubin level in blood serum

Intervention groups

1

Description

in cases: clofibrate 100 mg/kg once time/ day

Category

Treatment - Drugs

2

Description

in controls: distilled water once time/ day

Category

Placebo
