Iranian Registry of Clinical Trials

10 Jun 2026

" Study of the effectiveness of Bilva ointment on burn wound outcomes of patients admitted "

Protocol summary

Study aim

Determine the Effectiveness of Bilva Ointment on the Outcome of Burn Sores

Design

Double blind clinical trial with parallel groups, who were selected in simple randomized method using table of random numbers. Final sample size was 34 patients.

Settings and conduct

The burn wards of men and women located in Sina Hospital will be considered as the research environment. First, qualified individuals will be included in the study after obtaining informed consent. Member (right or left) in the intervention group is determined by random numbers and stored in envelopes. These packs are determined by specimens without the intervention of the researcher and consequently by random allocation.

Participants/Inclusion and exclusion criteria

Patients with maximum 20% burning of the body surface and first degree burns without blister in the sympathetic organs with the same depth are included in the study. Patients with additional diseases, using substances other than drinking water on the burn are excluded from the study.

Intervention groups

An organ burned with silver sulfadiazine ointment 1% will be dressed in accordance with the routine of the hospital and its sympathetic section using Beiloy ointment. Other nursing care such as daily bath, primary wound healing with normal saline before dressing, management of blister wounds and ... will be the same for both members.

Main outcome variables

Wound healing,Pain,Itching,Infection,Hypertrophy

Inclusion/Exclusion criteria

Inclusion criteria:

Patients with 20% or less burns of second degree The location of the burn in the symetric extremities with the same depth Patients who do not have any underlying disease such as diabetes mellitus, allergic skin diseases, malignancy, AIDS, hypertension, and cytotoxic drugs. It is not more than 2 hours from the time of burning up to the time of entry into the research The patient's wound is not impregnated with contaminants The patient did not use any substance other than drinking water on the wound before the sample entered the study Before entering the study, the patient is not infected with different parts of the body The patient is able to answer questions.

Exclusion criteria:

The cause of the patient's burn is chemical or electrical. Patients who have inhaling injuries

Age

Sample size

Target sample size: **33**

More than 1 sample in each individual

Number of samples in each individual: **2**

Both sides of symmetrical wounds, one is in the control group and the other is in the intervention group.

Randomization (investigator's opinion)

Randomized

Randomization description

First, patients are selected based on entry criteria. A random number table is used to select which hand (right or left) is in the control or intervention group.

Blinding (investigator's opinion)

Double blinded

Blinding description

The person completing the checklist is not aware of the type of treatment has undergone. An analyst is not aware of the type of the group.
