Evaluation of the effect of oral Dydrogesterone (Duphaston) on vaginal bleeding and abortion rate in threatened abortion at first trimester

Protocol summary

Study aim

Evaluation of the effect of oral Dydrogesterone (Duphaston) in threatened abortion at first trimester referring to Mahdiah and Shohada-e-Tajrish Hospitals during the years 2016 and 2017

Design

In this clinical trial, 170 pregnant women aged 18 to 35 years of age eligible for the study are randomly assigned into two groups of oral therapy and control groups, according to the random number table.

Settings and conduct

Pregnant women aged 18 to 35 years old eligible for the study referred to Mahdiah and Shohad-e Tajrish hospitals after obtaining written consent and recording information (age, age, last menstrual period (LMP), gestational age, history of previous pregnancies, vaginal bleeding history in previous pregnancies, vaginal bleeding amount and history of abortion) are randomly divided into two groups of oral dystrogestrone (duphestone) and control, and were monitored for up to 20 weeks. The duration of vaginal bleeding is recorded before and after the study and the occurrence of abortion will record.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Pregnant women aged 18 to 35 years old; singleton pregnancy; symptoms and signs of threaten abortion in the first trimester; an ultrasound report with viable fetus Exclusion criteria: Presence of underlying conditions such as high blood pressure and diabetes; allergies to dystrogestrone components

Intervention groups

The case group: Treatment with oral dydrogesterone (Duphaston®, Solvay company, USA), 40 mg in the first dose, followed by 10 mg every eight hours until the bleeding was discontinued and the relative rest in the bed. The control group: Only conservative treatment with relative rest in the bed

Main outcome variables

Duration of vaginal bleeding and the occurrence of

abortion

Scientific title

Evaluation of the effect of oral Dydrogesterone (Duphaston) on vaginal bleeding and abortion rate in threatened abortion at first trimester

Public title

Evaluation of the effect of oral Dydrogesterone (Duphaston) in threatened abortion at first trimester

Purpose

Prevention

Inclusion/Exclusion criteria**Inclusion criteria:**

Pregnant women in the first trimester Presence of symptoms and signs of threatened abortion Singleton pregnancy Having an ultrasound report with viable fetus

Exclusion criteria:

The presence of underlying illnesses such as high blood pressure, diabetes Known allergy to dystrogesterone components

Age

From **18 years** old to **35 years** old

Gender

Female

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **170**

Randomization (investigator's opinion)

Randomized

Randomization description

Use the random numbers table and randomization according to the the order of entering to the study
