Comparison of the effects of propofol and isoflurane on blood glucose during surgery in diabetic patients

Protocol summary

Summary

The purpose of this study was to compare the effects of propofol and isoflurane on blood glucose during abdominal hysterectomy in the diabetic women in Shahid Sadoughi hospital , Yazd, Iran. In this randomized double blind trial, 30 women, aged 35-65 years old, and ASA physical status II, are assigned into one of the two groups to receive propofol or isoflurane for maintenance of anesthesia. systolic ,diastolic and mean arterial pressure ,end tidal co2 are measured before induction of anesthesia ,immediately after intubation ,after skin incision , and then every 15 minutes until the end of surgery. Blood glucose is measured before induction of anesthesia ,after skin incision and every 30 minutes until the end of recovery time .Dextrose -saline half normal and regular insulin infuse during surgery to control blood glucose between 100-180 mg/dl. Total dose of insulin that is used during surgery is recorded .

Scientific title

Comparison of the effects of propofol and isoflurane on blood glucose during surgery in diabetic patients

Public title

Comparison of the effects of two anesthetic drugs on blood glucose during surgery in diabetic patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: type II diabetic women who are candidate for elective abdominal hysterectomy, age 35-65 years old and their BS at the night before surgery and FBS were <200 ,Exclusion criteria: patients with diabetic nephropathy ,ischemic heart disease, a history of allergy to anesthetic drugs ,severe hepatic disease ,opium addiction, BMI >35

Age

From **35 years** old to **65 years** old

Gender

Female

Phase

N/A

Health conditions studied

1

Description of health condition studied

diabetes

ICD-10 code

E10

ICD-10 code description

Insulin-dependent diabetes mellitus

Primary outcomes

1

Description

blood glucose

Timepoint

before induction of anesthesia ,after skin incision and every30 minutes until the end of recovery time

Method of measurement

Glucometer (Accu-chek)and blood sample

2

Description

insulin requirements

Timepoint

at the end of surgery

Method of measurement

the units of required insulin

Secondary outcomes

1

Description

systolic ,diastolic and mean arterial pressure

Timepoint

Before induction of anesthesia ,immediately after intubation ,and then every 15 minutes

Method of measurement

with using blood pressure monitoring device (SAADAT)

Intervention groups

1

Description

in this group maintenance of anesthesia is with 0.5-1 MAC isoflurane

Category

Treatment - Drugs

2

Description

In this group maintenance of anesthesia is with propofol 100-200 microgram/kg/min

Category

Treatment - Drugs
