The Effect of Dexmedetomidin Infusion on Reducing Pain After Open Kidney Surgery

Protocol summary

2018-08-11, 1397/05/20

Study aim

Determination of the Effect of Dexmedetomidine on Pain After Open Surgery of Kidney Stones

Design

In this double-blind study, 33 patients who will be candidated for renal surgery in a randomized, randomized manner were randomly assigned to two groups of control and intervention.

Settings and conduct

This study will be conducted at Mashhad University of Medical Sciences, Imam Reza Hospital and Ghaem Hospital. In this study, researchers and patients are not aware with the type of interior.

Participants/Inclusion and exclusion criteria

After approving of the Ethical Committee of the Mashhad University of Medical Sciences and consent form of patients in Imam Reza and Ghaem Hospital, patients who are candidates for open surgery of renal kidney will be included in the study.

Intervention groups

1. Intervention group: Slow infusion of 200 micrograms of dexmedetomidine 2. Control group: Slow infusion of normal saline in intravenous

Main outcome variables

Postoperative pain level based on VAS scale

Inclusion/Exclusion criteria

Inclusion criteria:

Candidate for open-renal surgery consenting to participate in the study age 18-65 years ASA class 1 and 2 BMI more than 30 have not allergy to the drug no

addiction to drug or alcohol not taking benzodiazepines permanently Exclusion criteria: Systolic blood pressure lower than 100 heart rate less than 60 before the injection Hypotension or heart rate decrease by more than 30% at baseline or during the injection History of psychological illness Use of any analgesic drug before operation Needing to use an additional dose of opiates of more than 20% of the standardized value in the study during anesthesia Be longer surgery for any reason failure to do or complete the surgery at any stage for any reason	Ethics committee of Mashhad University of Medical sciences Street address Mashhad University of Medical Sciences; International Offic Administration Center(Qoreishi Building) ; Daneshgah St., Mashhad Mashhad City Mashhad Province Razavi Khorasan Postal code 9137913316
Age From 18 years old to 65 years old Gender Both Phase N/A Groups that have been masked - Participant - Investigator	Approval date 2018-06-22, 1397/04/01 Ethics committee reference number IR.MUMS.fm.REC.1397.15
Sample size Target sample size: 33 Randomization (investigator's opinion) Randomized Randomization description The envelope method is that the envelopes are prepared and printed by a member of the research team and random numbers with the help of the Randomaize.com site and inside the envelope. The door packs will be closed and its contents are not visible from the outside. Then, the purpose of the study is explained to the person who described the conditions, and the person, if desired, signs the informed consent form and removes an envelope, then opens it and, based on the contents of the envelope, enters into the intervention or control group. Blinding (investigator's opinion) Double blinded Blinding description Participants and researcher are not aware of the type of intervention.The trial was planned in such a way that neither the subjects nor the observers (researchers) know who the group is.
