

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Jun 2026

A comparative study on the efficacy of three methods of addiction obstacle education on the knowledge, attitude and performance regarding to Methamphetamine abuse among the employees of YAZD University of Medical Sciences.

Protocol summary

Study aim

The aim of this study was to evaluate the effectiveness and comparisons of three methods of training, prevention and use of methamphetamine "Shishe" (training, sending short messages and delivery of training manual) on knowledge, attitude, and performance toward Shishe in staff of shahid Sadoughi University of Medical Sciences in Yazd.

Design

In order to evaluate the research aims, 210 employees were selected by multistage cluster sampling and related experts have been used to train the content of the interventions. To train these courses, two training sessions were held each in a week for a group of 105 people. Before and after the training sessions, pre-test and post-test were taken. Then, 3 months after training, a retrospective test was taken. At the same time, the groups were divided into three groups of 70 members; the first group was taught training by SMS; the second group was taught training through the CD; and the third group was taught training by manual training; finally, after three months of training in these three ways, the final post-test was taken.

Settings and conduct

In order to evaluate the research aims, 210 staff of 6 assistance were selected by multistage cluster sampling and related experts have been used to train the content of the interventions. A randomized method is a simple cluster that is to blind by the random number table. In this study, participants, researchers, data collection responsibilities and those who evaluate the outcomes are kept blind.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Being between 18 and 64 years old
Being staff of Yazd University of Medical Sciences
Being participated in training classes
Exclusion criteria: Being

less than 18 and more than 64 years old
Not being staff of Yazd University of Medical Sciences
Not being participated in training classes

Intervention groups

In this study training is an intervention. In order to evaluate the research aims, 210 employees were selected by multistage cluster sampling and related experts have been used to train the content of the interventions. To train these courses, two training sessions were held each in a week for a group of 105 people. Before and after the training sessions, pre-test and post-test were taken. Then, 3 months after training, a retrospective test was taken. At the same time, the groups were divided into three groups of 70 members; the first group was taught training by SMS; the second group was taught training through the CD; and the third group was taught training by manual training; finally, after three months of training in these three ways, the final post-test was taken.

Main outcome variables

Knowledge regarding to Methamphetamine abuse
Attitude regarding to Methamphetamine abuse
Performance regarding to Methamphetamine abuse

Title and more details about the data/document

Only part of the data, such as information about the main message or like that, can be shared.

When the data will become available and for how long

Start the access period 3 months after printing the results

To whom data/document is available

Researchers working in academic, scientific and industrial institutions

Under which criteria data/document could be used

All uses of data is permitted by the permission of the researcher.

From where data/document is obtainable

By email: dr.farahzadi@yahoo.com, mh-farahzadi@razi.tums.ac.ir or phone call: 00989133513197

What processes are involved for a request to access data/document

The documentation will be sent 10 days after receiving the email.
