

Clinical Trial Protocol

Iranian Registry of Clinical Trials

29 Jun 2026

To investigate the effect of needle magnet on risk of scrub nurses' needle contact and dispersion of sharp things in heart, thoracic and organ transplantation surgery.

Protocol summary

Study aim

Objective: To investigate the effect of needle magnet on risk of scrub nurses' needle contact and dispersion of sharp things in heart, thoracic and organ transplantation surgery. Based on inclusion and exclusion criteria, 80 scrub nurses are randomly selected and randomly divided into two groups; intervention and control. In the intervention group, participants receive needle magnet before the start of operation. Scrub nurses' needle contact and dispersion of sharp things before and after using needle magnet is measured by the questionnaire that verified its validity and reliability previously. In the control group there is no intervention.

Design

Clinical trial with a control group, randomized, parallel group

Settings and conduct

Namazi Hospital

Participants/Inclusion and exclusion criteria

Scrub Nurses

Intervention groups

In the intervention group, participants receive needle magnet before the start of operation. Scrub nurses' needle contact and dispersion of sharp things before and after using needle magnet is measured by the questionnaire that verified its validity and reliability previously.

Main outcome variables

Needle Stick Injury
