Comparative survey of nebulized morphine and intravenous morphine for decreasing renal colic patients' pain

Protocol summary

Study aim

Comparative survey of nebulized morphine and intravenous morphine for decreasing renal colic patients' pain.

Design

In this research, 50 patients with renal colic divided in two groups randomly. Emergency department nurse starts the treatment with IV and nebulized morphine.

Settings and conduct

Location: Shahid Sadoughi Hospital and Shahid Rahnemoun Hospital in Yazd. The patient, the nurse, the researcher, the result evaluator, data analyzer, aren't aware of treatment method.

Participants/Inclusion and exclusion criteria

All patient above 18 years old with renal colic who has severe pain that are confirmed by urine analysis or ultrasonography. exclusion criteria : Morphine sensitivity , systole blood pressure < 110 millimeter mercury - respiratory rate < 12 per minute - saturation of oxygen < 95 percent , rhinitis or nose blocking , using pain-killer in 6 hours before visit and people with asthma and morphine sensitivity don't get surveyed.

Intervention groups

In first group : 5 mg morphine iv + 5 cc n/s nebulize (placebo) and in second group 10 mg morphine nebulize + 5 cc n/s iv treated.

Main outcome variables

pain level , side effects

Scientific title

Comparative survey of nebulized morphine and intravenous morphine for decreasing renal colic patients' pain

Public title

Comparative survey of nebulized morphine and intravenous morphine in renal colic

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

All patient above 18 years old severe pain caused by renal colic assigned by U/A severe pain caused by US

Exclusion criteria:

Morphine sensitivity SO₂<95 RR<12 SBP<110 rhinitis nose blocking asthma gainig analgesic 6 hours before admit

Age

From **18 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor
- Data analyser

Sample size

Target sample size: **46**

Actual sample size reached: **50**

Randomization (investigator's opinion)

Randomized

Randomization description

Convenience sampling by filling up the questionnaire achieves to finish the process. Randomization is individual and Emergency department nurse, enters the samples to each therapy processes.

Blinding (investigator's opinion)

Double blinded

Blinding description

When a case enters, the nurse allocates the patient into case and control groups using a coin. He/She treats case or control. Then another nurse fills up the questionnaire . At the end the outcome assessor classified the questionnaire.

Placebo

Used

Assignment

Parallel

Other design features

"VAS" is used for pain measurement.
