

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

10 Jun 2026

### Comparison the effect of Persian medicine products (containing honey and flax seed) and placebo on Forced Expiratory Volume in First Second and wheezing intensity among patients with severe persistent asthma, A triple-blind randomized placebo-controlled trial

#### Protocol summary

##### Study aim

This study aimed to assess the effect of Persian medicine products containing honey and flax seed in patients with severe persistent asthma

##### Design

A randomized controlled clinical trial and triple blind, parallel study

##### Settings and conduct

This study is conducted at Shahid Beheshti Hospital in Qom and the blinding will be done using placebo.

##### Participants/Inclusion and exclusion criteria

Inclusion criteria: patients with severe persistent asthma over a year; age group of 12-80. Exclusion criteria: Kidney, liver, and heart failure based on the tests, history and physical exam; High blood pressure more than 180 mm Hg; fever; pregnancy and lactation.

##### Intervention groups

Intervention group: The group will use Persian medicine product (containing honey and flax seed), 40 gram for 3 months, every day. Control group: The group will use placebo, 40 gram every day for 3 months.

##### Main outcome variables

Forced Expiratory Volume in First Second; Wheezing intensity

#### General information

empty

##### Scientific title

Comparison the effect of Persian medicine products (containing honey and flax seed) and placebo on Forced Expiratory Volume in First Second and wheezing intensity among patients with severe persistent asthma, A triple-blind randomized placebo-controlled trial

##### Public title

The effect of a Persian medicine product on patients with severe persistent asthma

**Purpose**

Treatment

**Inclusion/Exclusion criteria****Inclusion criteria:**

Patients with severe persistent asthma over a year Age group 12-80

**Exclusion criteria:**

Kidney,liver,and heart failure based on the tests, history and physical exam High blood pressure more than 180 mm Hg Fever Pergnancy and lactation;

**Age**

From **12 years** old to **80 years** old

**Gender**

Both

**Phase**

3

**Groups that have been masked**

- Participant
- Care provider
- Outcome assessor
- Data analyser

**Sample size**

Target sample size: **80**

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

Patients will be randomly allocated into two groups using random numbers table developed by Random Allocation Software.

**Blinding (investigator's opinion)**

Triple blinded

**Blinding description**

In this study, placebo will be used for blinding in which placebo is very similar to the main drug in terms of color and taste. Therefore, patients, statistical analyst and physicians won't bet aware of the allocation of patients to either drug or placebo group and someone outside the group is aware of the allocation of treatment.

**Health conditions studied****1****Description of health condition studied**

Asthma

**ICD-10 code**

J45.5

**ICD-10 code description**

Severe persistent asthma

**Primary outcomes****1****Description**

Forced Expiratory Volume in First Second

**Timepoint**

Before and after the intervention (end of month 3)

**Method of measurement**

Spirometry testing

**Secondary outcomes****1****Description**

Wheezing intensity determination

**Timepoint**

At the first of the study(before intervention) and 3 months after intervention

**Method of measurement**

History and physical exam with stethoscope

**Intervention groups****1****Description**

Intervention group: The group will use Persian medicine product (containing honey and flax seed), 40 gram for 3 months, every day.

**Category**

Treatment - Drugs

**2****Description**

Control group: The group will use placebo, 40 gram every

day for 3 months. The placebo contains edible color, aspartame and corn flour, and is made by Tehran University of Medical Sciences.

**Category**

Placebo
