Comparison of the success rate of immediate versus delayed implant placement in patients who need implant: a randomized clinical trial

Protocol summary

2018-02-19, 1396/11/30

Study aim

To compare the success rate of immediate versus delayed implant placement in patients who need implant

Design

This is a randomized clinical trial, phase II, in which 50 eligible patients will be randomly assigned to the intervention (immediate implant placement) and control (delayed implant placement) groups

Settings and conduct

The eligible patients who need implant and will refer to School of Dentistry during the study period will be enrolled in the trial

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age of 18 to 65 years Need implant

Exclusion criteria: Tooth and gum infection

Intervention groups

Intervention group: Immediate implant placement immediately after tooth extraction without using bone marrow material Control group: Delayed implant placement one month after tooth extraction without using bone marrow material

Main outcome variables

Primary outcome: Assessing clinical success of implant one year after surgery through clinical examination and radiography

Scientific title

Comparison of the success rate of immediate versus delayed implant placement in patients who need implant: a randomized clinical trial

Public title

Comparison of the success rate of immediate versus delayed implant placement in patients who need implant

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age of 18 to 65 years Need implant

Exclusion criteria:

Tooth and gum infection

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **50**

Randomization (investigator's opinion)

Randomized

Randomization description

Random assignment of the patients to the intervention and control groups through drawing of lots

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Health conditions studied

1

Description of health condition studied

The failure or success of implant placement

ICD-10 code

M27.6

ICD-10 code description

Endosseous dental implant failure

Primary outcomes

1

Description

Assessing clinical success of implant

Timepoint

One year after surgery

Method of measurement

Through clinical examination and radiography

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Immediate implant placement immediately after tooth extraction without using bone marrow material

Category

Treatment - Surgery

2

Description

Control group: Delayed implant placement one month after tooth extraction without using bone marrow material

Category

Treatment - Surgery
