Design and evaluation of theory-based educational intervention on the safety behavior of pedestrians in yazd city

Protocol summary

Study aim

Design and evaluation of theory-based educational intervention on the safety behavior of pedestrians in yazd city

Design

six health centers and 2 blocks of them are selected by random numbers table. 3 centers and their blocks are as intervention groups and the others are control groups. then, 17 individual are selected of each block, randomly. after searching their eligibility, questionnaire is distributed to all subjects.

Settings and conduct

in the study ,we use of double blinding. The participants and analyst is not aware of the intervention and control groups.

Participants/Inclusion and exclusion criteria

204 people(18 to 35 years old) are hired in the study with the following criterias: Interest in participating in the study • Visit his/her social network maximum every three days • crossing the street once a week • Lack of linguistic or communication problems

Intervention groups

Intervention is educational clips that upload in the social network. 3 months after the intervention, the effectiveness of the educational clips is evaluated. In the control group, clips are downloaded about drivers' behavior in terms of speed and priority.

Main outcome variables

intention and safe crossing of road

Scientific title

Design and evaluation of theory-based educational intervention on the safety behavior of pedestrians in yazd city

Public title

The effect of educational intervention on the pedestrian behaviors of Yazd city

Purpose

Education/Guidance

Inclusion/Exclusion criteria

Inclusion criteria:

Age range 18 to 35 years Interest in participating in the study The ability to use virtual social networks the use of virtual social networks visit of his or her virtual social networks maximum every three days at a time Crossing the street in the last week

Exclusion criteria:

Not use of virtual social networks or Not visiting of them for more than three days Language disorders or problems in communication Lack of interest in continuing the study not responding to questionnaire 20% of the total or any part of the questionnaire

Age

From **18 years** old to **35 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant

Sample size

Target sample size: **204**

Randomization (investigator's opinion)

Randomized

Randomization description

First, six comprehensive health centers (2 centers from each 3 areas in Yazd) is selected by randomized sampling method . Then, 2 blocks of each center is selected by the random method. tool for randomization is statistical software. 3 centers and their selected blocks of that are control group and 3 other centers and their selected blocks are the intervention group. In fact, the centers are our block randomization unit (to prevent contamination, block randomization is done based on the telephone number of the people, so that the exchange of intervention and information decrease to the minimum).

Blinding (investigator's opinion)

Double blinded

Blinding description

Double blinding is performed . The clusters and blocks are coded. The training packages are also coded. Participants are unaware of a variety of educational package. Interrogators and analyst are not aware of type of educational package of each cluster / block and control and intervention group.

-

ICD-10 code

ICD-10 code description

کد ندارد

Primary outcomes

1

Description

the mean of intent to doing safe behavior

Timepoint

before of intervention and Three months after the intervention

Method of measurement

Self-report questionnaire

Secondary outcomes

1

Description

the mean of safe crossing of road

Timepoint

before of intervention and Three months after the intervention

Method of measurement

self report questionnaire

Intervention groups

1

Description

Intervention group:we Provide educational clips according to the results of pretest . so put the chips on the virtual network

Category

Behavior

2

Description

Control group: This group does not receive intervention. After finishing the study, the video clips will be loaded into their virtual group.
