Accuracy of pulse oximetry in detection of oxygen saturation in patients admitted to the intensive care unit of heart surgery: comparison of finger, toe, forehead and earlobe probes

Protocol summary

Study aim

Comparison of the Oxyhemoglobin saturation accuracy in pulse oximeters of the fingers, toes, foreheads, and ears in patients undergoing open heart surgery

Design

Trial without control group, before and after, without blindness

Settings and conduct

The present study will be conducted in the intensive care unit. At first, 2 cc of blood is taken from each of the samples through the arterial catheter. The blood samples in a container of ice will be sent immediately to the laboratory. In the form of arterial blood gas analysis, hemoglobin and body temperature are also recorded. Tympanic thermometer is used to determine the patient's temperature. All patients will be in the supine position while the head of the bed is 30 degrees above the body level. To prevent ambient light from interfering with the operation of each of the four types of pulsed oximetry probes, a cover is placed around the probes. The amount of spo2 from four types of the forehead, ear, toe and finger probes will be measured simultaneously by sampling arterial blood gas at a time interval of 0, 1, 2, 3, 4, and 5 minutes. All probes are calibrated before use. The average difference between the amount of sao2 and spo2 and the agreement between them will be calculated using the Bland-Altman analysis. The higher the agreement, the more accurate the probe is.

Participants/Inclusion and exclusion criteria

Open heart surgery patients, lack of left ventricular failure, lack of peripheral vascular disease, lack of renal failure, and temperatures above 35 °C

Intervention groups

The intervention involves the placement of four types of pulsed oximetry probes in the forehead, ear, fingers and toes.

Main outcome variables

arterial oxygen saturation

Scientific title

Accuracy of pulse oximetry in detection of oxygen saturation in patients admitted to the intensive care unit of heart surgery: comparison of finger, toe, forehead and earlobe probes

Public title

Comparison of pulse oximeter accuracy in determining oxygen saturation

Purpose

Diagnostic

Inclusion/Exclusion criteria

Inclusion criteria:

Have been undergoing open heart surgery Have an arterial line Temperature higher than 35 ° C Hemoglobin greater than 9 g/dl Mean arterial blood pressure above 60 mm Hg PaO₂ between 70 to 100% PCO₂ less than 45 mm Lack of hematologic problems (anemia, methemoglobinemia, carboxyhemoglobinemia) The absence of left ventricular dysfunction, peripheral vascular disease, acute and chronic renal failure The absence of clubbing fingers No history of smoking The absence of scars, burns, edema, and dressing in place of probing Not receiving medications that affect blood vessel diameter

Exclusion criteria:

Patients requiring suction Patients need to change position

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **67**

Actual sample size reached: **67**

Health conditions studied

1

Description of health condition studied

cardiovascular diseases

ICD-10 code

R94.30

ICD-10 code description

Abnormal result of cardiovascular function study, unspecified

Primary outcomes

1

Description

Percentage of arterial oxygen saturation

Timepoint

At intervals of zero, one, two, three, four, and five minutes

Method of measurement

Using five pulse oximetry probes

Secondary outcomes

1

Description

Arterial oxygen concentration(Pao₂)

Timepoint

Once at the beginning of the intervention

Method of measurement

By taking arterial blood sample

Intervention groups

1

Description

The intervention group is the patients undergoing cardiac surgery. At the beginning of the study, the

oxygen levels of the arterial blood of all samples will be measured. Then the pulse oximeter probes will be placed in the forehead, ear, throat, fingers, toes, and nose. At intervals of zero, one, two, three, four, and five minutes, the amount of arterial oxygen saturation will be measured by pulse oximeter.

Title and more details about the data/document

The main consequence is the possibility of sharing information.

When the data will become available and for how long

Six months after the publication of the article

To whom data/document is available

Researchers working in academic and scientific institutions

Under which criteria data/document could be used

There is no right to extract the article from the documentation.

From where data/document is obtainable

Dr. Alireza Khatony

What processes are involved for a request to access data/document

Within a week of receiving the email, it will be answered.
