The effects of a weight loss diet with or without prebiotic supplementation on oxidative stress indices and depression severity in obese women suffering from major depressive disorder

Protocol summary

Study aim

The aim of the present study is to investigate the effects of a weight loss diet with or without prebiotic supplementation on oxidative stress indices and depression severity in obese women suffering from major depressive disorder

Design

Randomized double-blind clinical trial with two arm parallel groups

Settings and conduct

The study will be conducted in the psychiatry clinic of Tabriz University of Medical Sciences, and supplementation duration will be 8 weeks. The prebiotic and placebo sachets will be coded by the person responsible for preparing them, and the main investigators and the patients will be blinded to the type of the supplement each group receives.

Participants/Inclusion and exclusion criteria

48 patients with mild to moderate depression and BMI of 30-40 Kg/m² will be included in the study. Pregnancy, lactation, and co-morbidity of other psychological or neurological diseases are among the exclusion criteria of the study.

Intervention groups

The subjects in both groups will receive a weight loss diet considering their dietary habits. Patients in the prebiotic group will use a 10 gram inulin sachet with their lunch, daily. In the placebo group, the sachet will contain 10 grams of maltodextrin.

Main outcome variables

Montgomery-Asberg Depression Rating Scale; serum levels of total antioxidant capacity (TAC), malondialdehyde (MDA), nitric oxide (NO), and isoprostane-F₂, as well as the arylesterase activity of paraoxonase

Scientific title

The effects of a weight loss diet with or without prebiotic supplementation on oxidative stress indices and depression severity in obese women suffering from major depressive disorder

Public title

Effect of prebiotic supplementation in treatment of major depressive disorder

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Non-menopausal women aged 20-50 years Body Mass Index (BMI) range: 30-40 Kg/m² Suffering from mild to moderate depression based on DSM-V (Diagnostic and Statistical Manual of Mental Disorders, 5th Edition) criteria, as diagnosed by a psychiatrist Having received SSRI and SNRI drugs for at least 2 months willingness to participate in the study

Exclusion criteria:

Pregnancy or lactation Co-morbidity with other major psychological or neurological diseases including psychosis, multiple sclerosis (MS), bipolar disorder Suffering from thyroid dysfunctions Drug abuse Smoking A history of following particular diets Using synthetic or herbal drugs for weight loss Changes in medication protocol for major depressive disorder, during the study Changes in type or dosage of any other medications during the study Using fiber supplements or taking more than 25 grams of dietary fiber per day Regular use of prebiotic or probiotic products or supplements, or antibiotic drugs during 2 months prior to the study or during the study

Randomization (investigator's opinion)

Randomized

Randomization description

From among the patients who volunteer to participate in the study, 48 individuals will be selected by simple randomization. Then by using the Random Allocation Software, the subjects will be allocated into either prebiotic or placebo group, stratified by drugs intake, depression severity and BMI.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, the main investigators (including the

student, and her supervisor and adviser professors) as well as the patients will be blinded to the type of the supplement (prebiotic or placebo) received by each group. The person responsible for preparing the supplement sachets (who is completely unrelated to the study) will be asked to assign a three digit code to each of the two powders (prebiotic and placebo), and keep the codes for himself until the end of the study and data analyses.

Primary outcomes

1

Description

Oxidative stress indices

Timepoint

Baseline and 8 weeks after intervention

Method of measurement

Measurement of serum levels of Total antioxidant capacity (TAC), malondialdehyde (MDA) and nitric oxide (NO) by spectrophotometry, serum isoprostane-F2 by ELISA, and arylesterase activity of paraoxonase enzyme by using phenyl acetate through spectrophotometry

2

Description

Depression severity

Timepoint

Baseline and 8 weeks after intervention

Method of measurement

Montgomery-Asberg Depression Rating Scale (MADRS)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Patients in this group will receive weight loss diet and prebiotic supplements for 8 weeks. Prebiotic supplement is a sachet containing 10 grams of inulin (a product by Sensus Co. and made in The Netherlands) which will be dissolved in a glass of water and used once a day with lunch.

Category

Treatment - Drugs

2

Description

Control group: Patients in this group will receive weight loss diet and placebo for 8 weeks. Placebo is a sachet containing 10 grams of maltodextrin (a product by FIC Co. and made in China) which will be dissolved in a glass of water and used once a day with lunch.

Title and more details about the data/document

Data collected for the primary outcomes will be shared.

When the data will become available and for how long

access starting 12 months after publication

To whom data/document is available

The data will only be available for people working in academic institutions.

Under which criteria data/document could be used

The data of the present study will only be accessible by other researchers, for conducting Meta-analysis.

From where data/document is obtainable

To access the required data, the researchers can contact Ms. Elnaz Vaghef-Mehrabany: email address: elnaz.vaghef@gmail.com cellphone number: 0098 9143044360

What processes are involved for a request to access data/document

The applicant should provide a brief description of the aims and methods of his Meta-analysis. His request will be assessed by the researchers, and if all of them agree to the request, the requested data will be emailed to the applicant in an Excel file format. All these procedures will take no longer than 15 days.
