

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparing the effect of nano-Curcumin with Curcumin and control group on primary dysmenorrhea among 18-27 years old women

Protocol summary

Study aim

Studying and comparing the effectiveness of nano-curcumin to curcumin in the pain of primary dysmenorrhea

Design

A placebo controlled, parallel group, double blind, in three randomised controlled groups, phase 3 clinical trial

Settings and conduct

In this double blind experiment, qualified models will be chosen by questionnaire at the universities and Shohadaye Tajrish Hospital.

Participants/Inclusion and exclusion criteria

Inclusion criteria: having primary dysmenorrhea age of 18-27 Informed consent Exclusion criteria: pregnancy and lactation hypersensitivity to the Curcumin products using other drugs asthma, GI tract diseases, cholelithiasis and obstruction of gall duct intolerance of NSAIDs using anti-coagulant agents developing ovarian cysts using OCPs

Intervention groups

Patients enter in 3 groups which two of them will be treatment group and the other group will be a control group. All three groups will receive mefenamic acid for the control of menstrual pain. Control group will receive mefenamic acid and placebo for three consecutive menstrual periods. Nano-curcumin group will receive mefenamic acid and nano-curcumin for three consecutive menstrual periods. Curcumin group will receive mefenamic acid and curcumin for three consecutive menstrual periods.

Scientific title

Comparing the effect of nano-Curcumin with Curcumin and control group on primary dysmenorrhea among 18-27 years old women

Public title

Studing the effect of Nano-curcumin and curcumoup in primary dysmenorrhea

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

having primary dysmenorrhea age of 18-27 Informed consent

Exclusion criteria:

pregnancy and lactation hypersensitivity to the Curcumin products using other drugs asthma, GI tract diseases, cholelithiasis and obstruction of gull duct intolerance of NSAIDs using anti-coagulant agents developing ovarian cysts using OCPs

Age

From **18 years** old to **27 years** old

Gender

Female

Phase

3

Groups that have been masked

- Participant
- Care provider
- Investigator

Sample size

Target sample size: **180**

Randomization (investigator's opinion)

Randomized

Randomization description

Random number table: based on Random Sequence Generator via random.org website three groups were made. Patients were allocated in one of three groups based on their entry sequence.

Blinding (investigator's opinion)

Double blinded

Blinding description

This is a double blind study in which both researcher and patients don't know that which drug the patient have been used. Drugs will be dispensed by a third person in uniform packages with codes. Instructions on the number of consumption will not be seen by the prescriber.

Health conditions studied**1****Description of health condition studied**

Dysenorrhea

ICD-10 code

N94.4

ICD-10 code description

Primary dysmenorrhoea

Primary outcomes**1****Description**

Intensity of pain in primary dysmenorrhea

Timepoint

The measurement of intensity of pain, in first 3 days of 4 consecutive menstrual period

Method of measurement

Visual Analogue Scale and quality of life questionnaire

Secondary outcomes**1****Description**

Quantity of Mefenamic acid

Timepoint

Patients in first month will just use Mefenamic acid and in three following months will use mefenamic acid besides study drugs if it is necessary.

Method of measurement

By questionnaire.

Intervention groups**1****Description**

Intervention group 1: first intervention group is nano-curcumin group. This medicine in the form of 80 mg soft gelatin capsule will be consumed once daily by oral route for the first three days of menstruation for 3 consecutive months. Nano-Exir Sina is the manufacturer of this drug.

Category

Treatment - Drugs

2

Description

Control group: patients in this group will receive one 80 mg of placebo capsule daily by oral route for the first three days of menstruation for 3 consecutive months.

Category

Placebo

3

Description

Intervention group: Group 2 receives curcumin 500 mg tablets, tablets are manufactured by Dineh, Tehran, Iran. Tablets will be consumed twice daily by oral route for the first three days of menstruation for 3 consecutive months.
