The Effect of Endurance Swimming Activity on the Serum Concentration of Surfactant D and Clara Cell Proteins in Elite Swimmers

Protocol summary

Study aim

The purpose of the present study was to investigate the effect of one session of endurance swimming activity on the serum concentration of surfactant D and Clara proteins in elite swimmers.

Design

experience and control group, Community based and pragmatic, parallel group, not blinded, randomized

Settings and conduct

20 minutes of endurance training in Taleghani pool of Tabriz city and in the morning at 10 o'clock without blindness of groups

Participants/Inclusion and exclusion criteria

Swimming experience in province level and no specific disease and no smoking

Intervention groups

Intervention group: 10 elite endurance male swimmers.
Control group: 10 male who were practicing swimming with the aim of maintaining health and fitness. Both groups performed 20 minutes of endurance swimming.

Main outcome variables

Surfactant and Clara cell
