Effects of Wii Fit training on balance, confidence and quality of life on elderly population

Protocol summary

Study aim

Elderly population is expected to have balance problems and are at risk of fall. The study will assess the level of balance problems in elderly and effects of Wii Fit balance training on these subjects.

Design

A concealed, randomized, double blinded trial with 90 participants enrolled July and August 2018.

Settings and conduct

Study will be conducted at Physical Therapy department of Kulsum International hospital, Islamabad Pakistan. Participants and outcome assessor will be blinded in the study.

Participants/Inclusion and exclusion criteria

Vitally stable, physically independent subjects with age 60 years and above without any systemic, neurological or orthopedic disorders.

Intervention groups

Participants will receive Wii Fit training for 30 minutes three times a week for 8 weeks.

Main outcome variables

Activity balance confidence, Berg balance scale, Timed up and go, Fukuda, Euro 5D, 5L

Scientific title

Effects of Wii Fit training on balance, confidence and quality of life on elderly population

Public title

Wii Fit training in elderly population

Purpose

Health service research

Inclusion/Exclusion criteria

Inclusion criteria:

Physically independent individuals above 60 years of age without any serious systemic pathology or recent injury
Vitally stable

Exclusion criteria:

Subjects with any type of neurological or orthopedic

disorder

Age

From **60 years** old

Gender

Both

Phase

1

Groups that have been masked

- Participant
- Outcome assessor

Sample size

Target sample size: **90**

More than 1 sample in each individual

Number of samples in each individual: **2**

Before and after provision of intervention in both groups

Actual sample size reached: **83**

More than 1 sample in each individual

Actual sample size in each individual: **2**

Before and after application of intervention

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be by sealed envelop. Concealed allocation

Blinding (investigator's opinion)

Double blinded

Blinding description

Participants of both control and experimental group as well as the person who will assess the outcomes before and after application of intervention.
