Perinatal outcome and Growth after radiofrequency ablation in complicated monochorion diamnion twin pregnancies (Yas Hospital-Tehran University of Medical Sciences)

Protocol summary

Study aim

Evaluation of the consequences of Radio-frequency in complicated monochorion diamnion pregnancies, with one twin with IUGR or TTTS or TRAP or anomaly.

Design

This is a prospective intervention study with single group. In this study, MCDA pregnancies complicated with IUGR or TTTS or anomalies or TRAP, encounter with FR waves and followed up by pregnancy outcomes.

Settings and conduct

Location: Yas Hospital, Tehran, Iran. Pregnant women with MCDA twin suffering from complicated pregnancies candidate for using radio frequency waveform.

Participants/Inclusion and exclusion criteria

Complicated monochorion diamnion pregnancies, with one twin with IUGR or TTTS or TRAP or anomaly.

Intervention groups

The use of radio frequency waves in reducing complicated twin in monochorion diamnion pregnancies

Main outcome variables

Increasing the chances of survival and health in uncomplicated twin

Scientific title

Perinatal outcome and Growth after radiofrequency ablation in complicated monochorion diamnion twin pregnancies (Yas Hospital-Tehran University of Medical Sciences)

Public title

Perinatal outcome and Growth after radiofrequency ablation in complicated monochorion diamnion twin pregnancies (Yas Hospital-Tehran University of Medical Sciences)

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Dichorion diamniotic twin Including IUGR or TTTS, or one twin Anomalie or TRAP

Exclusion criteria:

Dissatisfaction with entering the study

Age

No age limit

Gender

Female

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 110

Randomization (investigator's opinion)

Health conditions studied**1****Description of health condition studied**

IUGR; TRAP sequence, TTTS; anomaly of one twin

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

The main consequence is increase in the survival of the unaffected twin in twin MCDA pregnancies which one twin reduced with radio frequency waves.

Timepoint

Evaluation will be performed immediately after the RF and one after the delivery, which implies neonatal outcomes through questionnaire

Method of measurement

questionnaire

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: The use of radio frequency waves in reducing complicated twin in MCDA twins
