Comparison of group education with sending health messages and education through CD on knowledge, attitude and practice of male about participation in perinatal care

Protocol summary

Study aim

Determining and comparing the effect of two methods of group training with the sending of SMS messages and CD-ROM training on men's knowledge, attitude and practice about participation in perinatal care

Design

The clinical trial has two intervention groups and one control group, each group based on the lottery and randomly selected from a prenatal clinic. Sample size for each group of 22 and total was calculated to be 66. but considering the chance of sample loss, sample size was increased to 72.

Settings and conduct

The research environment is three prenatal clinics is affiliated Social Security Organization of Tabriz city, each group will be randomly selected from a center. Initially, through pregnancy care records, the list of pregnant women with a gestational age of 20 to 22 weeks was extracted and through Phone will be invited from their husband to participate in the research. Training for group education is conducted in two sessions 2-hours with a weekly interval on Fridays in rooms in the same centers, and then each week 3-4 health messages will be sent to them.

Participants/Inclusion and exclusion criteria

The inclusion criteria are Being literate; not having passed any educational courses; living with spouse; There is no problem in the relationship between couples. The exclusion criteria are unwillingness to continue the study; and not participating in all the conducted educational sessions for the education group.

Intervention groups

The present study is a clinical trial which is conducted on three groups of group education with sending health messages , education using multimedia compact disk (CD) and control group.

Main outcome variables

Knowledge, attitude and practice in all three groups will be measured before and 3 months after intervention through researcher-made questionnaires.
