

Clinical Trial Protocol

Iranian Registry of Clinical Trials

07 Jun 2026

The effects of aquatic exercises in shallow and deep water on balance, proprioception, muscle strength and quality of life in chronic Ischemic stroke male patients

Protocol summary

Study aim

Determining the effect of aquatic exercises at two different depths on balance, proprioception, muscle strength and quality of life in male patients with chronic ischemic stroke

Design

This clinical trial study with pretest and posttest design was performed on 36 patients with chronic ischemic stroke by available sampling method and classified into 3 groups equal 12: experimental group1 (shallow practice); experimental group 2 (deep training) and control group

Settings and conduct

Examination in the hospital and the protocol for water therapy in the pool. In general, the stages of this research include: 1. Preparing the subjects along with examining the criteria for entering and preparing the data collection tool: General information, general health and TGE, MMSE, SF36, MRC, NIHSS, MRS.

Participants/Inclusion and exclusion criteria

A score of 23 and above is from the Mini Mental State Exam score of 21 to 44 from the berg balance scale the TUG test time of less than 13 seconds

Intervention groups

groups did the aquatic exercise therapy program that included of 18 sessions in 6 weeks and 3 sessions per week for 30 minutes. But the control group did not experience any aquatic exercise

Main outcome variables

balance, proprioception, muscle strength and quality of life

Scientific title

The effects of aquatic exercises in shallow and deep water on balance, proprioception, muscle strength and quality of life in chronic Ischemic stroke male patients

Public title

"The effect of Hydrotherapy in patients with stroke"

Purpose

Prevention

Inclusion/Exclusion criteria**Inclusion criteria:**

Patients with cerebral stroke and chronic, ischemic stroke desire to participate in the research 40 to 70 years the first stroke Patients have at least 6 months from the onset of the disease and have a maximum of 2 years have the ability to stand without help (at least 5 minutes) all subjects must be able to walk with or without the aid (at least 10 meters) To have the ability to follow orders not participating in regular physical activity and not having a physical therapy program during the study

Exclusion criteria:

Having a disrupted dizziness Having a certain diseases

Age

From **40 years** old to **70 years** old

Intervention groups**1****Description**

Intervention group: The first group (shallow) intervenes in depth, with water up to the height of the pelvis, the

subjects performed this training session for 6 weeks (18 sessions) and 3 sessions per week for the implementation of the water exercise protocol.

Category

Rehabilitation

2**Description**

Intervention group: The second group of interventions (deep) takes place deep in the water to the height of the chest, the subjects performed this training session for 6 weeks (18 sessions) and 3 sessions per week for the implementation of the water exercise protocol.

Category

Rehabilitation

3**Description**

Control group: (Without exercise) that the group did not experience any blueprints that had their normal routine during these six weeks.
