

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

The immediate effect of anti-pronation foot orthoses on kinematic and kinetics of gait in ACL reconstructed individuals with and without pronated feet

Protocol summary

Study aim

Comparisons of gait biomechanics in ACL reconstructed subjects with and without foot pronation

Design

Thirty male subjects will be volunteered to participate in this study. They will be divided in three groups (1- healthy controls; 2- ACL reconstructed subjects with normal feet; 3- ACL reconstructed subjects with foot pronation).

Settings and conduct

Gait analysis will be done by motion capture systems in biomechanics laboratory in Islamic Azad University, Hamedan, Iran.

Participants/Inclusion and exclusion criteria

The subjects must have ACL reconstructed ligament

Intervention groups

1- Healthy subjects 2- ACL reconstructed subjects with normal feet 3- ACL reconstructed subjects with foot pronation

Main outcome variables

1- Kinematic variables 2- Kinetic variables

Scientific title

The immediate effect of anti-pronation foot orthoses on kinematic and kinetics of gait in ACL reconstructed individuals with and without pronated feet

Public title

The gait analysis of ACL reconstructed individuals

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

ACL injury of the subjects

Exclusion criteria:

Symptoms of pain, fatigue, and physical limitations in the

subjects Signs of joints diseases,diseases of bones and neuromuscular dysfunction in the subjects

Age

No age limit

Gender

Male

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 30

Randomization (investigator's opinion)

Not randomized

Health conditions studied

1

Description of health condition studied

The subjects one year post ACL reconstruction

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

The kinematics and kinetics of lower limb joints during walking

Timepoint

cross-sectional study

Method of measurement

1- Motion control device (3 dimensional camera), 2- Force platform

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: before and after using an anti-pronation foot orthoses (medial arch support insole), the biomechanical analysis of walking in ACL reconstructed individuals with pronated feet (flat feet) will be done by using three-dimensional camera in laboratory.

Category

Treatment - Other

2

Description

Intervention group: before and after using an anti-pronation foot orthoses (medial arch support insole), the biomechanical analysis of walking in ACL reconstructed individuals with normal foot type will be done by using three-dimensional camera in laboratory.

Category

Treatment - Other

3

Description

Control group: before and after using an anti-pronation foot orthoses (medial arch support insole), the biomechanical analysis of walking in normal healthy individuals will be done by using three-dimensional camera in laboratory.

Category

Treatment - Other
