Effect of group logo therapy on depression and anxiety in patients with cancer: A clinical trial study

Protocol summary

Study aim

Effect of group logo therapy on depression and anxiety in patients with cancer: A clinical trial study

Design

Open-label, parallel group, randomized trial. Thirty patients will be randomly assigned to experimental and control group.

Settings and conduct

After studying and signing consent form, participants are randomly replaced in groups. Subsequently, the test group members will undergo a group logo therapy training, after a full explanation of their research and satisfaction from them for 10 weeks, weekly in one session and about 60 to 70 minutes. All subjects will complete all research tools in two rounds. Upon completion of the ten sessions of group logo therapy, again, both the test (test and control) will be tested by research tools. The site of the project is in the Shahid Ghazi Tabatabaee hospital of Tabriz city .

Participants/Inclusion and exclusion criteria

Inclusion criteria: Having a 20 to 45 year old age range, having reading and writing skills, satisfaction to participate in research Exclusion criteria: having a comorbid physical illness, having a psychiatric disorder

Intervention groups

Experimental group will have group logo therapy and control group don't have any interventions.

Main outcome variables

Depression, Anxiety
