Effect of oral black cumin (*Nigella Sativa*) supplement on the expression of genes involved in adipogenesis and serum concentrations of liver enzymes and lipid profiles among obese and overweight women

Protocol summary

Study aim

Effect of oral black cumin (*Nigella Sativa*) supplement on the expression of genes involved in adipogenesis and serum concentrations of liver enzymes and lipid profiles among obese and overweight women

Design

This is a cross-over randomized placebo controlled double blind clinical trial. The target group consisted of 35 women who will randomly assigned into one of the two groups. Duration of the intervention consisted of 2 periods of 2 months;

Settings and conduct

Obese and overweight healthy women who will be referred to Imam Ali hospital in Yazd city, will be recruited and will be randomly divided into 2 groups of supplement and placebo; capsules will be given in a double-blind process; participants and researchers will be blinded to the content. Blood collection will be done to assess the biochemical factors at the beginning and the end of each period; RNA will be extracted from the blood of all participants before and after every intervention in the Internal section of hospital. RTPCR test will be performed on blood samples. After a 1-month washout, all the mentioned procedures will be done for the second period.

Participants/Inclusion and exclusion criteria

Inclusion criteria are healthy obese and overweight women aged 27 to 55 years old with the BMI ranges of 27 to 35 kg/m²; exclusion criteria includes the presence of allergy to the supplements during the intervention period or the use of less than 10% of the supplements.

Intervention groups

the treatment group will receive 2 pearls per day , that each pear contain 1000 ml of nigella sativa for 2 periods of 2 months; the placebo group will receive 2 pearls per day , that each pear contain 1000 ml of placebo for 2 periods of 2 months; one month of washout period will be

performed between the 2 periods.

Main outcome variables

Adipogenesis related gene sequence; LDL-c; HDL-c; TG; TC; AST; ALT; ALK; SBP; DBP

Scientific title
Effect of oral black cumin (Nigella Sativa) supplement on the expression of genes involved in adipogenesis and serum concentrations of liver enzymes and lipid profiles among obese and overweight women

Public title
Effects of nigella satva on obesity related gene changes

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Obese women whose overweight and obesity were defined according to WHO criteria. The BMI range of participants should be between 27 to 35 kg/m². Age ranges should be 25 to 55 years old. Healthy overweight and obese women will be interred to the study.
Exclusion criteria:
Having replacement treatments like Hormone or supplemental vitamins or weight loss drugs; tobacco and alcohol use chronic or acute inflammatory disease ; heart valve disease ; short bowel syndrome ; allergies individuals with low immune system (autoimmune diseases) pregnancy and lactation consuming less than 40% of Nigella sativa or placebo supplements. individuals who had allergy to the nigella sativa supplements.

Age
From **25 years** old to **55 years** old

Gender
Female

Phase

Sample size
Target sample size: **35**

Randomization (investigator's opinion)
Randomized

Randomization description
For the primary recruitment of participants, stratified randomization method will be used based on participants age including 25-40 and 40-55 years old. and the random number table will be used to assign participants to the intervention and control (placebo) groups.

Blinding (investigator's opinion)
Double blinded

Blinding description
The appearance and shape of the Supplements and placebos pearls will be similar; every complete packs will be given once for the first 2 months of the intervention and once before the second 2 months of the intervention. A and B labels will be fixed on the bottles of pearls by someone irrelevant to the entire study.

Participants and researchers will be blinded to the contents in the bottles through out the study.

Health conditions studied

1

Description of health condition studied

Obesity and overweight

ICD-10 code

E66.9

ICD-10 code description

Obesity, unspecified

Primary outcomes

1

Description

Alteration in adipogenesis related gene sequence

Timepoint

Four times; at the beginning and the end of the first 2-month trial and at beginning and the end of the second 2-month trial

Method of measurement

centrifuge

2

Description

Liver enzyme, alanine aminotransferase (ALT)

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

Assay Kits (Pars Azmoon Co.)

3

Description

Lipid profile

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

Assay kits (Padgin Teb Co.)

4

Description

Liver enzyme, Aspartate aminotransferase

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

Assay Kits (Pars Azmoon Co.)

5

Description

Liver enzyme, Alkaline phosphatase (ALK)

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

Assay Kits (Pars Azmoon Co.)

Secondary outcomes

1

Description

Blood Pressure

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

Mercury barometer

2

Description

anthropometric measurements

Timepoint

4 times; at the initiation and the end of the first 2-month trial and at the initiation and the end of the second 2-month trial

Method of measurement

digital anthropometric scale

Intervention groups

1

Description

Intervention group: the treatment group will receive 2 pearls of Nigella sativa per day after lunch and dinner, that each pearl contain 1000 ml of nigella sativa for 2 periods of 2 months; the pearls are produced by Barij Co.

Category

Treatment - Other

2

Description

Control group: the placebo group will receive 2 pearls per day , that each pear contain 1000 ml of placebo for 2 periods of 2 months; one month of washout period will be performed between the 2 periods. placebo will be the oral paraffin.

Category

Placebo
