

Clinical Trial Protocol

Iranian Registry of Clinical Trials

09 Jun 2026

The effect of nutritional consultation on gastrointestinal complications in patients undergoing radiotherapy of abdominal and pelvic cavity cancer

Protocol summary

Study aim

The effect of nutritional consultant on reduce the gastrointestinal complications

Design

After confirming the inclusion criteria and obtain written inform consent, patients were randomly allocating into two groups (using table of random numbers and sealed envelopes used to hide). In the first or intervention group educational program will be given to the patient by the researcher during 3 sessions of an hour in three times a week (during two weeks) and second or non-intervention group, intervention not given. Sample size in study is 80.

Settings and conduct

Patients that referred to Towhid Hospital in Sanandaj city will included in study. After confirming the inclusion criteria and obtain written inform consent, patients were randomly allocating into two groups (using table of random numbers and sealed envelopes used to hide). This trial is double blind.

Participants/Inclusion and exclusion criteria

The inclusion criteria is following: Mean age 40-84 years, Diagnostic abdominal and pelvic cavity cancer pathology. Receive abdominal and pelvic cavity radiotherapy. Patients should be at least one-week radiotherapy. Exclusion criteria is following: Patients with colon cancer Chronic digestive disorders The history of Gluten and Celiac intolerance

Intervention groups

Intervention group: will be given nutritional consultant to the patient by the researcher during 3 sessions of an hour in three times a week (during two weeks), individually and face-to-face at the Radiotherapy Hospital of Tohid Hospital. Control group: In this group intervention will not done.

Main outcome variables

Nausea, Vomiting, Abdominal bloating, Diarrhea and Constipation

Groups that have been masked

- Participant
- Outcome assessor

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

After confirming the inclusion criteria and obtain written inform consent, patients were randomly allocate into two groups (using table of random numbers).

Blinding (investigator's opinion)

Double blinded

Blinding description

Opaque sealed envelopes numbered sequentially with the group type written in them will used for allocation concealment. The envelopes will prepared by a researcher not involved in data collection. The envelopes will opened after completing the pre-intervention questionnaires. Therefore, before random assignment of participants, outcome assessor and participants will unaware of what participants were assigned to each group.
