Effect of coping skill training versus no coping training on pain perception, anxiety and behavior in 3-6 years old children during dental treatment as a clinical trial

Protocol summary

Summary

Aim of this study is evaluating the effect of coping skill training versus no training on pain perception, anxiety and behavior in dental setting. Patients were selected from referred patients to Tabriz Dental Faculty, pediatric dentistry department, from 21/4/2015. Ninety patient were randomized using the website www.randomizer.org in two 45 case and control group. Case group will receive coping skill training before dental procedure whereas control group will not receive any training. Inclusion criteria are: 3-6 year old children, have at least one carious primary mandibular molar, needing inferior alveolar nerve block and physical and psychological health. Exclusion criteria are: children who have physical or psychological disorder, history of major medical or dental procedures and history of stress disorders. In both groups pain perception that is primary outcome and anxiety and behavior that are secondary outcomes, will be recorded by blinded person.

Intervention groups

1

Description

Intervention1: 45 patients in first visit received dental prophylaxis or fluoride therapy using Tell-Show-Do technique. In second visit before dental procedure they will receive coping skill training including deep breathing, silence time, muscle relaxation and releasing anxious thoughts in about 20 minutes. Training these skills will be done by a pediatric dentistry resident. Pain perception, anxiety and behavior in first and second visit will be measured by a resident of pediatric dentistry who is blinded to study.

Category

Behavior

2

Description

Intervention2: 45 patients in first visit received dental prophylaxis or fluoride therapy using Tell-Show-Do technique. In second visit they will receive routine dental procedure without any coping training. Pain perception, anxiety and behavior in first and second visit will be measured by a resident of pediatric dentistry who is blinded to study.
