Comparison of the effect of combined counseling and face-to-face on mothers self-efficacy in complementary nutrition and growth index of 6-10 month infants

Protocol summary

Study aim

Comparison of the effect of combined counseling and face-to-face on mothers self-efficacy in complementary nutrition and growth index of 6-10 month infants

Design

The present study is a clinical trial with two groups. Which will be conducted on 120 mothers with a 6-month-old healthy baby who will go to health centers in Mashhad for health care and have entry requirements. Five centers of health in Mashhad will be selected by drawing a center. And from the selected center, two centers or a covered base are selected by lottery method, which is a center of intervention group 1 and another center of intervention group 2, mothers with a 6 month old child having easy access to the study file They will be selected at the centers and will be informed by telephone and will be included in the study if they consent.

Settings and conduct

The place of sampling is in the selected health centers. The method of counseling is face-to-face in the intervention group 1, in the intervention group, the first 2 sessions are face-to-face and follow-up podcast links provided to mothers. To be done.

Participants/Inclusion and exclusion criteria

The informed consent of the parent, Iranian and resident of Mashhad, the lack of speech, audio or dialectal problems that prevent contact with the researcher, is the first birth, the gestational age is between 38 and 40, has at least fifth grade primary education, the mothers of the intervention group 2 have access to the Android device and the internet. The infant has no history of being admitted to infancy, term, IUGR, no metabolic and metabolic problems, and FTT.

Intervention groups

The intervention groups consist of two groups of maternity counseling and podcast counseling, which are

the same in the two groups.

Main outcome variables

Improved child nutrition counseling, saving time.

Public title

Comparison of the effect of combined counseling and face-to-face on mothers self-efficacy in complementary nutrition and growth index of 6-10 month infants

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

Have written informed consent to participate in the research. Iranian and resident of Mashhad. Do not have spoken, audible or dialectal problems that prevent communication with the researcher. The age of the mother is between 18 and 45 years old. Have at least fifth grade elementary education. The mother has no medical condition. (medical illness includes diabetes, cardiovascular disease, hypertension, epilepsy, migraine, history of head trauma, thyroid disease, connective tissue disease, asthma, respiratory disorders, kidney disease, anemia and stroke Brain) Mother is prenatal. Moms have access to Android and the Internet in a combination group. The age of the infant is 6 months, the growth curve between the 15th and the 85th percentile, has no metabolic and medical problems, low birth weight and hospitalization history.

Exclusion criteria:

Unwilling to continue studying. In the compilation group, they did not follow the tutorials and podcast files in a meeting, nor would they attend a face-to-face meeting in a counseling session, they would be excluded from the research process. Medical problems have occurred during the study for infants (listed in clause 6 of entry requirements). Do things like travel and change during the study, which leads to lack of follow up counseling sessions and missed infant formula. The infant has a history of hospitalization during the study period.
