

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

Comparative study of two doses of filgrastim (5 and 15 Microgram/ kg) on the absolute neutrophil count in children with cancer

Protocol summary

Study aim

Comparison of the effect of two doses of filgrastim (5 and 15 µg/kg) on absolute neutrophil counts in children with cancers

Design

clinical trial with two parallel, randomized and non-blind groups

Settings and conduct

Neutropenia patients admitted to Gorgan Taleghani Hospital oncology center who had inclusion/ exclusion criteria will assign to two groups by random allocation list. then by a checklist increasing rate of ANC, number of admission days, antibiotics & type of malignancy will be compared in two groups. Administration of antibiotics will be according to protocol, First, ceftriaxone and amikacin will be prescribed, If no response to treatment is given after 48 hours, vancomycin will be prescribed, if it does not respond again ceftriaxone will be changed to ceftazidime. for checking fever T chart is provided, also for blood components every 48 hours patients CBC are taken, if ANC > 1500 medication will be stopped.

Participants/Inclusion and exclusion criteria

inclusion criteria: patients with cancer associated with neutropenia; Parents informed consent; patients with absolute neutrophil count<1500 with one of the following items: 1.Neutropenia lasts for more than 7-10 days 2.Low blood pressure 3.Profound neutropenia 4.Sepsis 5.Pneumonia 6.fungal infections exclusion criteria: Patients with less than 1500 neutrophils while they have active leukemia or leukemia is not in the remission phase

Intervention groups

Group A will receive dose 5 and Group B 15 of the drug. Considering that the dose of 5 to 10 is used routinely in the therapeutic centers. Therefore, patients receiving the dose of 5 group A define as control group and patients receiving the dose of 15 group B as the intervention group

Main outcome variables

The absolute neutrophil count; number of hospitalization

days; number of days that patient received antibiotics; time taken to stop the fever

Scientific title

Comparative study of two doses of filgrastim (5 and 15 Microgram/ kg) on the absolute neutrophil count in children with cancer

Public title

Comparison of the effect of two doses of filgrastim in the treatment of neutropenia

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

patients with cancer associated with neutropenia
Parents' informed consent for their child's participation in the study patients with absolute neutrophil count<1500 with one of the following items: Neutropenia lasts for more than 7-10 days Low blood pressure Profound neutropenia Sepsis pneumonia fungal infections

Exclusion criteria:

Patients with less than 1500 neutrophils while they have active leukemia or their leukemia is not in the remission phase.

Age

To 14 years old

Gender

Both

Phase

2-3

Groups that have been masked*No information***Sample size**

Target sample size: 60

Randomization (investigator's opinion)

Randomized

Randomization description

Patients will be randomly allocated to one of the two groups A (5 Dose) or B (15 Dose). In such a way that drugs with doses of 5 and 15 will be prepared in similar packages, then, according to the sample size in each group, Using the Excel software in a column, a list of letters A and B will be created and in the next column a list of random numbers will be generated. And then the column of letters will be arranged based on the column of random numbers. then a sequence of random letters of A and B will be obtained. Assign the next column to the numbering, The number recorded against the letters A and B will be recorded on a package of the corresponding dose drug. and the Packages are provided to the therapist. Eligible patients will receive a package medication based on their order of referral, The name of the patient and the number on medication package will be included in a list and will be made available to the project executives.

Hospitalize duration

Method of measurement

from patient documents

Secondary outcomes

empty

Intervention groups

1

Description

First intervention group: Patients will receive daily 5µg/kg of G-CSF (Filgrastim brand) in addition to the antibiotic received in accordance to the protocol.

Category

Treatment - Drugs

2

Description

Second intervention group: Patients will receive daily 15µg/kg of G-CSF (Filgrastim brand) in addition to the antibiotic received in accordance to the protocol.

Category

Treatment - Drugs
