Clinical study of the Royal jelly effect on fatigue and quality of life in patients with multiple sclerosis in compare with Omega-3

Protocol summary

Study aim

The aim of this study was to compared effects of Royal jelly with Omega 3 on fatigue and quality of life of multiple sclerosis patients

Design

This study was a double-blind, controlled trial, 33 patients with MS were assigned in each group. For randomization, the permuted block randomization will be used with quadruple blocks, In order to apply the concealment in the randomization process, unique codes, which is generated by the software, will be used on the drug boxes.

Settings and conduct

All patients referred to Imam Golestan Hospital of Ahvaz, Iran, were assigned randomly in one of the treatment regimens for 4 weeks,

Participants/Inclusion and exclusion criteria

Inclusion criteria: MS patients have fatigue; No other neurological disease; No Diseases like diabetes and autoimmune diseases; No new attack in the last month
Exclusion criteria: Emergence of drug side effects; New disease attack; Do not take medicine for one week; Pregnancy

Intervention groups

Intervention group: Interferon (main treatment) with Omega-3 capsules (1 g daily) for one month
Intervention group: Interferon (main treatment) with Royal jelly capsules (1 g daily) for one month

Main outcome variables

MFIS questionnaire MSQ-54 questionnaire Blood parameters

Scientific title

Clinical study of the Royal jelly effect on fatigue and quality of life in patients with multiple sclerosis in compare with Omega-3

Public title

Effect of royal Jelly and Omega-3 in multiple sclerosis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Multiple sclerosis patients have fatigue

Exclusion criteria:

other neurological disease Diseases like diabetes and autoimmune diseases new attack in the last month

Emergence of drug side effects New disease attack

Pregnancy

Age

From **15 years** old to **66 years** old

Gender

Both

Phase

2-3

Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor

Sample size

Target sample size: **66**

Randomization (investigator's opinion)

Randomized

Randomization description

For randomization, the permuted block randomization will be used with quadruple blocks. blocks will be produced by using the online site (www.sealedenvelope.com)

Blinding (investigator's opinion)

Double blinded

Blinding description

Unique codes, which is generated by the software, will be used on the drug boxes. By entering each individual into the study based on the produced sequence, the drug box in which the code is registered, will be assigned to the individual. During the research, the randomization list is held by the statistic consultant, and the participants, the project implementer and all those who participate in the measurement of the indicators will not be aware of the assigned groups

Title and more details about the data/document

Only a part of the data will be shared

When the data will become available and for how long

Only a part of the data will be shared

To whom data/document is available

The access period will be 6 months after the publication of the results

Under which criteria data/document could be used

Six months after the publication of this study papers, the obtained data will be available to the applicant researchers for further analysis

From where data/document is obtainable

Applicants can be contacted with corresponding author by e-mail

What processes are involved for a request to access data/document

Applicants will be able to access the obtained data from current study by sending an email to the corresponding author up to one month
