Comparison of the effectiveness between steroid injection plus acupuncture and steroid injection alone in patients with coccydynia

Protocol summary

Study aim

comparison between steroid injection plus acupuncture and steroid injection alone in patients with coccydynia

Design

randomized clinical practice with control group, community based and pragmatic, with parallel groups

Settings and conduct

this study was performed in patients referred to Firoozgar hospital and analyzer is blind to information. patients are divided in to 2 groups by using block randomization method. interference in one group is injection in the most tender area and at the other group it is done with injection plus 8 sessions of acupuncture.

Participants/Inclusion and exclusion criteria

entering criteria: patients between 18 -75 years old, chronic coccyx pain at least 2 month, VAS > 4, have not had any injection or manipulation in the past 6 month
exiting criteria: age 18> or <75, history of injection or manipulation in the past 6 month, pain duration less than 2 month, VAS<4, history of poor control diabet or rheumatologic disorder, any low back pain radiating to sacrococcygeal area, history of any kind of canser, coccyx dislocation, acute fissure, coagulopathy, history of myelomeningocele and spinabifida, skin disease in the injection area, biofeedback therapy for other kind of pelvic muscle disorder.

Intervention groups

paitients who have had pain in coccyx more than 2 month and have VAS greater or equal 4 , and their history and physical examinations confirm the diagnosis, entering the experiment. then they divided in to 2 groups by using block randomization method. interference in one group is injection in the most tender area and teaching pelvic floor exercise and at the other group it is done with all above said plus 8 sessions of acupuncture.

Main outcome variables

mean pain intensity in patients in interference and control groups

Scientific title

Comparison of the effectiveness between steroid injection plus acupuncture and steroid injection alone in patients with coccydynia

Public title

Effect of acupuncture in coccydynia

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Patients with chronic pain in coccyx more than 2 month VAS more than or equal to 4 They haven't had injection or manipulation in past 6 month

Exclusion criteria:

History of injection or manipulation of coccyx in past 6 month Duration of pain less than 2 month VAS less than 4 History of poor control diabete History of rheumatologic disorders Existence of any kind of radicular pain in sacrococcygeal region History of cancer Dislocation of coccyx Acute fissure Coagulopathy History of myelomeningocele or spina bifida Skin disorders in the site of injection Concurrent biofeedback therapy in pelvic floor muscle

Age

From **18 years** old to **75 years** old

Gender

Both

Phase

- Data analyser

Sample size

Target sample size: **36**

Actual sample size reached: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients were included in the study using randomized sequencing (block randomization)

Blinding (investigator's opinion)

Single blinded

Blinding description

The analyser dose not know about which data is in the group of cases or controls

Placebo

Not used
