The effect of exercise during hemodialysis on health promoting behaviors of hemodialysis patients

Protocol summary

Study aim
The effect of exercise during dialysis on health promotion behaviors in patients undergoing hemodialysis

Design
A controlled clinical trial with a parallel group design of 60 patients

Settings and conduct
study setting: hemodialysis centers belonging to Isfahan University of Medical Sciences including dialysis department of AL-zahra hospital and dialysis center of Nour and aliasghar. How to do the study: Patients will divided into two groups of intervention and control. The intervention group will exercise for 30 minutes. Health promotion behaviors questionnaire will completed by them. The control group will receive simple exercise and will complete the questionnaire of Health promotion behaviors. This work will done for 8 weeks.

Participants/Inclusion and exclusion criteria
Incusion criteria: age between 18 and 65 years, Having full consciousness and being able to listen and speak to answer to questions, Having history of hemodialysis more than 3 month, Having 3 dialysis sessions per week. Exclusion criteria: having physical and mental disabilities, having known ischemic heart disease, heart attacks and angina during the last three months, suffering from acute pulmonary disease and needing for oxygen during dialysis, having a history of stroke or ischemic attacks over the last 3 months, suffering from muscle disorders that prevent Intended exercise

Intervention groups
Intervention group: the intervention group will participate in a exercise program.In this program, they will exercise in 2 courses (30 minute) and between these courses, the patient will rest for 30 minutes. This exercise is done for 8 weeks , three times a week. Control group: The patients will receive simple exercise (10 minutes), 3 times a week for 8 weeks.

Main outcome variables
The health promotion behaviors

Scientific title
The effect of exercise during hemodialysis on health promoting behaviors of hemodialysis patients

Public title
The effect of exercise during hemodialysis on health promoting behaviors

Purpose
Supportive

Inclusion/Exclusion criteria

Inclusion criteria:
being age between 18 and 65 year Having full consciousness and being able to listen and speak to answer to questions Having history of hemodialysis more than 3 months Having 3 dialysis sessions per week

Exclusion criteria:
having physical and mental disabilities having known ischemic heart disease, heart attacks and angina during the last three months suffering from acute pulmonary disease and needing for oxygen during dialysis having a history of stroke or ischemic attacks over the last 3 months suffering from skeletal muscle disorders that prevent Intended exercise

Age
From **18 years** old to **65 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **60**

Health conditions studied

1

Description of health condition studied
Chronic kidney disease

ICD-10 code
N18.5

ICD-10 code description
Chronic kidney disease, stage 5

Primary outcomes

1

Description
health promoting behaviors

Timepoint
At the beginning of the study, 8 weeks after the beginning of the intervention

Method of measurement
health promoting behaviors questionnaire

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: the intervention group will participate in a exercise program.In this program, they will exercise in 2 courses (30 minute) and between these courses, the patient will rest for 3o minute. This exercise is done by fixed bike. The intensity of the exercise will depend on the machine rotation round and is selected by patient.This exercise is done for 8 weeks , three times a week.
