The effect of Salvia Officinalis aromatherapy on sleep quality in menopausal women

Protocol summary

Study aim
Determine the effects of aromatherapy with Salvia Officinalis on sleep quality in menopausal women

Design
This randomized double-blind clinical trial with parallel groups study will perform on 60 menopause women referred to health centers of Kermanshah with the aim of investigating the effects of aromatherapy with Salvia Officinalis on sleep quality in menopausal women. At the beginning of the study, each person is assigned a code of 1 or 2, and the individuals with code 1, the control group and the code-holders 2 form the intervention group. Each eligible person for inclusion in the study randomly takes one of these cards with the codes written on it. In this way, the random allocation of patients to each group is determined.

Settings and conduct
This study will perform on menopause women referred to health centers. The intervention group for 3 nights in a week, for one month, 2 drops of essential oil of salvia that is in a dropper, on a cotton ball in the form of a neck pendant, and before Sleep is inhaled and removed from the neck after awakening. The control group also uses a placebo in the same way. In this study, researcher and data analyzer blindness will be used.

Participants/inclusion and exclusion criteria
Individuals should be allowed to enter the study who benefit most from the intervention. People who may be harmed by the intervention should not be included in the study.

Intervention groups
Intervention group with Salvia Officinalis (intervention group): for 3 nights in a week, for one month, 2 drops of essential oil of salvia that is in a dropper, on a cotton ball in the form of a neck pendant, and before Sleep is inhaled and removed from the neck after awakening. Control group with Almond (control group): The control group also uses a placebo containing Almond oil in the same way.

Main outcome variables
sleep quality

Scientific title
The effect of Salvia Officinalis aromatherapy on sleep quality in menopausal women

Public title
Effect of Salvia Officinalis aroma on sleep quality

Purpose
Supportive

Inclusion/Exclusion criteria

Inclusion criteria:
ages 45 to 65 years old through at least one year since the last menstruation not having a history of allergic rhinitis and known respiratory problems such as asthma the absence of physical and mental illness non-use of drugs, tobacco and alcohol Non-occurrence of stressful incidents in the past six months

Exclusion criteria:
the appearance of any physical and psychological illness during the study that causes sleep disorder the appearance of a significant change in sleep conditions unpredictably (divorce, death and travel) the sensation of Salvia aroma during the study Lack of the program performance for a maximum of one week during the study

Age
From 45 years old to 65 years old

Gender
Female

Phase
3

Groups that have been masked
- Investigator
- Data analyser

Sample size
Target sample size: 60

Randomization (investigator's opinion)
Randomized

Randomization description
This study, Simple randomization method is used for random allocation (hiding allocation). In this way, 60 cards matched in appearance are prepared and 30 of them have the number or code 1 that specifies the group “intervention based on essence of Salvia Officinalis” and on 30 others of them the number or code 2 which specifies the control group(Distilled water ) is written. Then, each eligible person for inclusion in the study randomly takes one of these cards with the codes written on it. In this way, the random allocation of patients to each group is determined without letting the participants to know the nature of the numbers 1 or 2 in the type of intervention that will be assigned.

Blinding (investigator's opinion)
Double blinded

Blinding description
In this study, to hide the allocation of aromas (essence of Salvia Officinalis) and placebo (Almond oil) Opaque envelopes sequentially numbered are used. Each envelope contains a glass of essence of Salvia Officinalis or placebo. Medications were placed on the envelope in the randomized allocation sequence by the person not involved in the study. Investigating individuals to study and delivering envelopes are done by the researcher himself from Nos. 1 to 60. In this study, blindness is not possible for the participant. Therefore, in this study, researcher and data analyzer blindness (lack of knowledge of the subject code) will be used, so the study will be double-blind.
