

Clinical Trial Protocol

Iranian Registry of Clinical Trials

29 May 2026

Study the effect of interactive education on adherence to diet ,quality of life and functional indicators in patients with celiac disease

Protocol summary

Study aim

Determining the effect of interactive education on adherence to diet, quality of life and performance indicators in patients with celiac disease

Design

Controlled clinical trial, community-based and pragmatic, parallel groups, randomized

Settings and conduct

The study will be performed after obtaining research approval from the ethics committee. The eligible participants will be invited to the Celiac center of Buali Hospital. After selecting the subjects of the study, the demographic information of participants, as well as the necessary data about their quality of life, diet adherence, functional index, and body mass index, will be recorded. The intervention will include 4 sessions of classes (90 min each session) for the experimental group. On the other hand, those in the control group will receive the usual care services. Before and after three months, participants will be asked to fill out the quality of life and diet adherence questionnaires. Furthermore, there will be an assessment of their body mass index and functional index.

Participants/Inclusion and exclusion criteria

Inclusion criteria: above 18 years old, no chronic disease (e.g., diabetes), hypothyroidism, hyperthyroidism, no mental disorders, no problem in communication (e.g., blindness or deafness), and non-pregnant women
Exclusion criteria: special and incurable diseases, inability to learn

Intervention groups

Intervention group: This group will receive 4 sessions of interactive education (90 min each session). Control group: This group will have a booklet on Celiac after the intervention.

Main outcome variables

Gluten free diet adherence, quality of life

Scientific title

Study the effect of interactive education on adherence to diet ,quality of life and functional indicators in patients with celiac disease

Public title

The effect of interaction education on patients with celiac disease

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Celiac disease, the diagnosis of celiac disease, is documented by a specialist in the medical records of the patient no chronic disease (e.g., diabetes), hypothyroidism, hyperthyroidism no mental disorders no problem in communication (e.g., blindness or deafness) non-pregnant women above 18 years old

Exclusion criteria:

special and incurable diseases inability to learn

Age

From **18 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **30**

Randomization (investigator's opinion)

Randomized

Randomization description

The patients referring to the celiac center of Buali hospital will be randomly selected and divided into two groups of experimental and control. In doing so, two cards were assigned as A and B, where A refers to the experimental group and B denotes control group. The subjects of the study will be asked to choose a card, and accordingly participants will be randomly placed in the control and experimental groups.

Blinding (investigator's opinion)

Not blinded

2018-07-14, 1397/04/23

Ethics committee reference number

IR.ZAUMS.REC.1397.185

Health conditions studied

1

Description of health condition studied

Celiac

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Compliance with a gluten-free diet

Timepoint

Before the intervention and 4 weeks after providing interactive education

Method of measurement

Dietary compliance questionnaire

2

Description

Quality of Life

Timepoint

Before the intervention and 4 weeks after providing interactive education

Method of measurement

Quality of life questionnaire for patients with celiac disease

3

Description

Serum iron

Timepoint

Measurement of serum iron before intervention and four months after intervention

Method of measurement

Perform a test with a fully automatic B.T 3000 machine

4

Description

Serum vitamin D

Timepoint

Measurement of serum vitamin D before intervention and four months after intervention

Method of measurement

Performing the experiment with FOMO ELITE ARIDER

5

Description

Body mass index

Timepoint

Measurement of height and weight before intervention and four months after intervention

Method of measurement

Height and weight measurements with HBMI PLUS-CR device

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Providing interactive education on the diet of patients with celiac disease who provided this training for four sessions of 90 minutes over a period of four weeks in groups of 7 to 9 with active participation of the patient in the formulation of content based on the content of the training, discussion and the exchange of ideas and questions and questions will be provided by the researcher.

Category

Behavior

2

Description

Control group: Receive no training about gluten free diet, they will receive a booklet on the topic of celiac disease after the intervention
