The effects of Health Coaching Approach based on motivational interview on improvement housewives' incorrect nutritional habits

Protocol summary

Study aim

Correcting undesirable nutritional habits of housewives

Design

In this study, 70 housewives with an unfavorable nutritional pattern that has an entry criteria are randomly divided into intervention and control groups.

Settings and conduct

Both groups are measured before and after the intervention by the frequency of food frequency questionnaires. Then, the intervention group will be based on a motivational interview in the health care home during six sessions under a coaching approach.

Participants/Inclusion and exclusion criteria

Entry criteria : Having a willingness to participate in research and at least fifth grade primary education, no disease, being a housewife Exit criteria : Unwillingness to continue cooperation, immigration Not attending at least one meeting.

Intervention groups

In the intervention group, a coaching approach is based on a motivational interview. There is no intervention in the control group

Main outcome variables

Undesirable nutritional habits of housewives
