

Clinical Trial Protocol

Iranian Registry of Clinical Trials

12 Aug 2026

The effect of six weeks of motor control exercises on selected kinetic, kinematic and lower extremity functional status in male professional athletes with anterior cruciate ligament reconstruction

Protocol summary

Study aim

The effect of six weeks of motor control exercises on kinetic, kinematic and lower extremity functional status in male athletes with anterior cruciate ligament reconstruction should be investigated.

Design

Clinical trial with a control group based on community with a parallel group

Settings and conduct

After the selection and entry of the participants in the Physical Education Research Institute, pre-intervention tests are carried out using isokinetic and motion analysers and exercises at the gym. After 6 weeks of training then tests such as pre-test conditions at the Research Institute of Science Sports are done

Participants/Inclusion and exclusion criteria

Inclusion criteria: having the surgery of anterior cruciate ligament using auto graft hamstring for the first time, Passing 6 months after the surgery, Having at least 2 years of experience in the fields of Handball, Basketball, Football and Volleyball in the provincial level, Not having any specific pain and swelling in the knee, Aged between 18-30 , Having completed physiotherapy course.

Exclusion criteria: Hearing problems, balance problems

Intervention groups

control group:current exercises such as double leg squat, double leg press and lunges prescribed by surgeon within six weeks each week two sessions. Intervention group: Intervention group do the current exercises the surgeon prescribes for the athletes. Also are needed to do the external motor control exercises such as single leg squat in front of a barrier cone, landing in front of the barrier, single leg lunges in front of a barrier, countermoment jump, standing on the Boso ball with a bar foam and jumping along a straight line during six weeks, each week for two sessions.

Main outcome variables

Joint angles such as (trunk flexion,knee flexion and knee valgus while landing), quadriceps power , hamstring power

Scientific title
The effect of six weeks of motor control exercises on selected kinetic, kinematic and lower extremity functional status in male professional athletes with anterior cruciate ligament reconstruction

Public title
Effect of feedback training on rehabilitation of anterior cruciate ligament

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
All patients who have first performed anterior cruciate ligament restoration using hamstring auto grafting method. Six months from the date of surgery. Having Completed the physiotherapy course. No swelling and pain in the knee. Having done one of the sports (Basketball_Football_Volleyball_Handball) for at least two years in the provincial level. Aged between 18 and 30 years.
Exclusion criteria:
Having hearing problems Affected by any condition abnormalities affecting the research process including the Femoral anteversion, genu valgum, genu varum, tibia rotation, and flat foot (recognizable by standard clinical methods) Participation in any rehabilitation program for anterior cruciate ligament

Age
From **18 years** old to **30 years** old

Gender
Male

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **25**

Randomization (investigator's opinion)
Randomized

Randomization description
A) Randomization method: Simple randomization (random number table) B) Building Random sequence method: Determining beforehand reading the table (up, down, right, left) then we start reading numbers from 0 to 50 intervention groups and 51 to 99 control groups. C) Randomization unit: Individual D) Randomization Tool: Random number table, sealed envelopes (for making random sequences) E) Concealment: Snose method A number of aluminum-covered envelopes (in order to keep the contents of the envelopes unclear) are prepared and each random sequence created on the card is recorded and the cards are inserted into the envelopes respectively. In order to maintain a random sequence, the numbering of the envelopes on the outer surface is done in the same order. Finally, the flap is

closed in pockets and placed in the box, respectively. At the time of registration of the participants, according to the order in which the participants are entered, one of the envelopes is opened and the allocated group of that participant is made known.

Health conditions studied

1

Description of health condition studied

injury of the anterior cruciate ligament

ICD-10 code

S83.5

ICD-10 code description

Sprain of cruciate ligament of knee

Primary outcomes

1

Description

Dynamic knee valgus angle during descent

Timepoint

Before the intervention and the end of the intervention

Method of measurement

Cortex Movement Analyzer

2

Description

Knee flexion during landing

Timepoint

Before and after the intervention

Method of measurement

Cortex Movement Analyzer

3

Description

trunk flexion during landing

Timepoint

Before and after the intervention

Method of measurement

Cortex Movement Analyzer

Secondary outcomes

1

Description

Quadriceps power

Timepoint

Before and after the intervention

Method of measurement

Biodex 4 isokinetic system

2

Description

Hamstring power

Timepoint

Before and after the intervention

Method of measurement

Biodex 4 isokinetic system

Intervention groups

1

Description

Intervention group: Intervention group do the current exercises the surgeon prescribes for the athletes. Also are needed to do the external motor control exercises such as single leg squat in front of a barrier cone, landing in front of the barrier, single leg lunges in front of a barrier, countermoment jump, standing on the Boso ball with a bar foam and jumping along a straight line during six weeks, each week for two sessions.

Category

Rehabilitation

2

Description

Control group: current exercises such as double leg squat, double leg press and lunges prescribed by surgeon and or physiotherapist within six weeks each week two sessions.
