

Clinical Trial Protocol

Iranian Registry of Clinical Trials

01 Aug 2026

Investigating the effect of Cancer Survivors' experiences on resilience of cancer patients

Protocol summary

Study aim

Investigating the Impact of Cancer Survivors' Experience on Rescuing Patients with Cancer

Design

Clinical trial with control group

Settings and conduct

At the first session, the test and control group is invited to introduce and complete the questionnaire. In this meeting, before the data are collected, the research objectives for the participants will be fully explained. The second, third, fourth and fifth sessions will be held with the experience of the survivors. At the sixth session, a separate intervention and control group will be invited to refer to the completed questionnaire to complete.

Participants/Inclusion and exclusion criteria

1. Conscious and written consent for participation in the study 2. Ability to attend meetings 3. Not having a history of other chronic diseases 4. Non-cancer in first-degree people 5. Age 60-20 years 6. Lack of participation in psychological training simultaneously 7. Getting involved in stage 2 or 3 cancer

Intervention groups

Patients participating in the research were randomly assigned to two groups of test (30 people) and control (30 people). Four survivors of cancer speak in a friendly and desirable environment based on their experiences of cancer, diagnosis, treatment, complications and self-care and adaptation to cancer, the effects of chemotherapy, nutrition, exercise, physical image, communication, and health issues. Patients in the test group participated in one of the four 120-minute training sessions once a week and are subject to an independent variable (surviving cancer). 20% of the final time of each session will be allocated to the free discussion. During this period, the control group will receive routine treatment.

Main outcome variables

resilience
