Iranian Registry of Clinical Trials

02 Jul 2026

The effect of Pre-hospital Trauma Management training of Ambulance Caregivers and impact on the Time indices and Clinical Decision Making of Traumatic Patients-

Protocol summary

Study aim

Determine the Impact of Traumatic Patient Management Program on Time Indicators Determine the Impact of Traumatic Patient Program on Clinical Decision Making

Design

The Samples are divided into two levels of Undergraduate and Bachelor education by stratified random sampling method and will be simple random sampling into two groups of intervention and control in each level in proportion to the number. Sample size According to the same study data for the clinical decision-making variable of medical emergency students, about 23 samples for each group were calculated. Considering the probability of the attrition of 25% of the samples, 29 were considered. In order to increase the strength of each group, 32 patients were considered.

Settings and conduct

In this research, the population will be technicians working in medical emergency centers affiliated to Gonabad University of Medical Sciences who have entry criteria. There will be no intervention for the control group. After and one month after the intervention, both post-test groups will be taken.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Do not have a trainee experience at the Trauma Management Workshop Exclusion Criteria: Emergency care report forms transmitted to the Medical center by more than one patient by an ambulance

Intervention groups

Intervention group: The intervention for the intervention group will be a two-day workshop for the management of traumatic patients. Emergency Medical Technicians will learn the measures and principles of Pre-hospital care in dealing with trauma patients in a combination of lecture methods and clinical simulations (real-life trauma scenarios in skill centers). Control group: In this group,

the main outcome variables will be measured without intervention.

Main outcome variables

Clinical Decision Making; Time Indices

Scientific title

The effect of Pre-hospital Trauma Management training of Ambulance Caregivers and impact on the Time indices and Clinical Decision Making of Traumatic Patients-

Public title

The effect of Pre-hospital Trauma Management training of Ambulance Caregivers and impact on the Time indices and Clinical Decision Making of Traumatic Patients-

Purpose

Health service research

Inclusion/Exclusion criteria**Inclusion criteria:**

Emergency Medical Operations Technicians Having Undergraduate Diploma or Bachelor of Emergency Medicine Do not have a trainee experience at the Trauma Management Workshop

Exclusion criteria:

Emergency care report forms transmitted to the Medical center by more than one patient by an ambulance

Age

No age limit

Gender

Male

Phase

N/A

Groups that have been masked

- Investigator
- Outcome assessor
- Data analyser
- Data and Safety Monitoring Board

Sample size

Target sample size: **64**

Randomization (investigator's opinion)

Randomized

Randomization description

The Samples are divided into two levels of Undergraduate and Bachelor education by stratified random sampling method and will be simple random sampling into two groups of intervention and control in each level in proportion to the number.

Blinding (investigator's opinion)

Single blinded

Blinding description

Participants, main investigators, researchers, data collection officials and those who evaluate the outcome, and the safety and monitoring committee of the data have been kept to the two groups of blind intervention and control.

Placebo

Not used

Assignment

Parallel

Other design features

Designing a questionnaire by a researcher and verifying its validity and reliability
