Sample size
Target sample size: **177**

Randomization (investigator's opinion)
Randomized

Randomization description
Accidental randomness with random and paired and random numbers is one in the groups. Randomization is done at the level of the individuals. The researchers, not the individuals, do not know how to place in the case group or the control group, and is a double-blind study. The only senior researcher here that the tutor knows is to inform people. After the research is decoded, it will be determined which individual is not the senior researcher in the field, but the main researcher in the field and in relation to the sample.

Blinding (investigator's opinion)
Double blinded
